Architecture and Systems Ecology William W. Braham, 2015-08-11 Modern buildings are both wasteful machines that can be made more efficient and instruments of the massive metropolitan system engendered by the power of high quality fuels. A comprehensive method of environmental design must reconcile the techniques of efficient building design with the radical urban and economic reorganization that we face. Over the coming century we will be challenged to return to the renewable resource base of the eighteenth century city with the knowledge, technologies and expectations of the twenty first century metropolis. This book explores the architectural implications of systems ecology which extends the principles of thermodynamics from the nineteenth century focus on more efficient machinery to the contemporary concern with the resilient self organization of ecosystems. Written with enough technical material to explain the methods it does not include in text equations or calculations relying instead on the energy system diagrams to convey the argument. Architecture and Systems Ecology has minimal technical jargon and an emphasis on intelligible design conclusions making it suitable for architecture students and professionals who are engaged with the fundamental issues faced by sustainable design. The energy systems language provides a holistic context for the many kinds of performance already evaluated in architecture from energy use to material selection and even the choice of building style. It establishes the foundation for environmental principles of design that embrace the full complexity of our current situation. Architecture succeeds best when it helps shape, accommodate and represent new ways of living together. [The Routledge Companion to Smart Design Thinking in Architecture & Urbanism for a Sustainable, Living Planet](#) Mitra Kanaani, 2024-11-11 This comprehensive companion surveys intelligent design thinking in architecture and urbanism, investigates multiple facets of smart approaches to design thinking that augment the potentials of user experiences as well as his/her physical and mental interactions with the built environment. Split into six paradigms, this volume looks at the theoretical and historical background of smart design, smart design methodologies and typologies, smart materials, smart design for extreme weather and climatic regions as well as climate change issues and side effects, smart mobility and the role of digital technologies and simulations in architectural and urban design. Often at odds with each other, this volume places emphasis on smart design for various typologies and user groups, emphasizing on advancements in form making and implementation of technology for healthy and sustainable living environments. Written by emerging and established architects, planners, designers, scientists and engineers from around the globe, this will be an essential reference volume for architecture and urban design students and scholars as well as those in related fields interested in the implications, various facets and futures of smart design. **Curating Architecture and the City** Sarah Chaplin, Alexandra Stara, 2009-04-16 Addressing the collection, representation and exhibition of architecture and the built environment, this book explores current practices, historical precedents, theoretical issues and future possibilities arising from the meeting of a curatorial subject and an architectural object. Striking a balance between theoretical

investigations and case studies the chapters cover a broad methodological as well as thematic range Examining the influential role of architectural exhibitions the contributors also look at curatorship as an emerging attitude towards the investigation and interpretation of the city International in scope this collection investigates curation architecture and the city across the world opening up new possibilities for exploring the urban fabric **Imminent Commons: Urban Questions for the Near Future** Hyungmin Pai,Alejandro Zaera-Polo,2022-02-04 The cities of the world stand at a crossroads Amidst radical social economic and technological transformations will the city become a driving force of creativity diversity and sustainability or will it be a mechanism of inequality despair and environmental decay At this critical moment where do the stakes lie and what are the agents of change From the time of its birth the city has been held together by the commons The book includes essays by Alejandro Zaera Hyungmin Pai Maider Llaguno Nerea Calvillo Hyewon Lee Lindsay Bremner Alex Ivancic I aki Abalos Charles Waldheim David Gissen Carlo Ratti Daniele Belleri Antoine Pico Saskia Saseen Adam Greenfield Jesse LeCavalier Philip Rode Duncan McLaren Julian Agyeman Gunter Pauli Gramazio and Kohler Mario Carpo Dirk E Hebel Marta H Wisniewska Felix Heisel Mitchell Joachim and Christian Hubert The first publication of the Seoul Biennale of Architecture and Urbanism 2017 proposes a framework that sets basic commons an evolving network of agencies resources and technologies as the critical issue in the move towards a sustainable and just urbanism It shows an exploration not of distant utopias but of the very near future because the emerging commons is changing the way we connect make move recycle sense and share and the way we manage air water energy and the earth Whether met with fear or hope they will very soon change the way we live in the city **The Fabric of Space** Matthew Gandy,2014-10-31 A study of water at the intersection of landscape and infrastructure in Paris Berlin Lagos Mumbai Los Angeles and London Water lies at the intersection of landscape and infrastructure crossing between visible and invisible domains of urban space in the tanks and buckets of the global South and the vast subterranean technological networks of the global North In this book Matthew Gandy considers the cultural and material significance of water through the experiences of six cities Paris Berlin Lagos Mumbai Los Angeles and London Tracing the evolving relationships among modernity nature and the urban imagination from different vantage points and through different periods Gandy uses water as a lens through which to observe both the ambiguities and the limits of nature as conventionally understood Gandy begins with the Parisian sewers of the nineteenth century captured in the photographs of Nadar and the reconstruction of subterranean Paris He moves on to Weimar era Berlin and its protection of public access to lakes for swimming the culmination of efforts to reconnect the city with nature He considers the threat of malaria in Lagos where changing geopolitical circumstances led to large scale swamp drainage in the 1940s He shows how the dysfunctional water infrastructure of Mumbai offers a vivid expression of persistent social inequality in a postcolonial city He explores the incongruous concrete landscapes of the Los Angeles River Finally Gandy uses the fictional scenario of a partially submerged London as the starting point for an investigation of the actual hydrological
