General Register and Record Office of Shipping and Seamen,1925 **Disentangled** R. France,2023-09-14 The Definitive Study and Solution to the Centuries old Mystery of the World s Most Sighted Sea Serpent There is a long history of conflating sightings of unidentified marine objects UMOs as purported sea serpents Most sightings are either of an extremely brief duration or made by a single observer and thus often easy to dismiss This is not the case however with respect to the so called Gloucester Sea Serpent which frequented the Massachusetts and New York coasts during the early nineteenth century Witnessed by hundreds of people for extended periods repeatedly over many days the Gloucester UMO is the most sighted sea serpent in history As well due to being the object of study at the time and shortly thereafter by naturalists the mysterious creature remains the most thoroughly investigated of all putative sea serpents For these reasons it has achieved an exalted status among cryptozoologists who maintain it represents the best evidence for the existence of sea serpents For the first time an eminently qualified aquatic biologist and ethnozoologist presents the definitive history of the phenomena and carefully examines the evidence It is concluded that the most parsimonious explanation behind the Gloucester Sea Serpent is as early evidence for what is today recognized as being one of the most serious threats to marine biodiversity entanglement in fishing

gear and other maritime debris Therefore although widely considered to be restricted to the advent and widespread use of non degradable plastic in the middle of the twentieth century this new interpretation of the Gloucester UMO suggests that entanglement has a much longer environmental history than is commonly believed Robert L France is a world renowned scientist at Dalhousie University and the author or editor of twenty books and two hundred papers on a wide range of environmental subjects He has undertaken conservation biology research from the High Arctic to the tropics on organisms from bacteria to whales which has been cited many thousands of times in the literature Dr France is a leading authority on many aspects of aquatic zoology including marine ecology and ethnozoology and may be the most qualified person to have recently undertaken research and published peer reviewed articles on the beguiling and befuddling topic of aquatic mystery animals known as cryptids

The Veliger, 1978-07 **Dynamic Aquaria** Walter H. Adey, Karen Loveland, 2011-08-29 In its third edition this praised book demonstrates how the living systems modeling of aquatic ecosystems for ecological biological and physiological research and ecosystem restoration can produce answers to very complex ecological questions Dynamic Aquaria further offers an understanding developed in 25 years of living ecosystem modeling and discusses how this knowledge has produced methods of efficiently solving many environmental problems Public education through this methodology is the additional key to the broader ecosystem understanding necessary to allow human society to pass through the next evolutionary bottleneck of our species Living systems modeling as a wide spectrum educational tool can provide a primary vehicle for that essential step This third edition covers the many technological and biological developments in the eight plus years since the second edition providing updated technological advice and describing many new example aquarium environments Includes 16 page color insert with 57 color plates and 25% new photographs Offers 300 figures and 75 tables New chapter on Biogeography Over 50% new research in various chapters Significant updates in chapters include The understanding of coral reef function especially the relationship between photosynthesis and calcification The use of living system models to solve problems of biogeography and the geographic dispersal and interaction of species populations The development of new techniques for global scale restoration of water and atmosphere The development of new techniques for closed system sustainable aquaculture

Behavioral Adaptation to Intertidal Life Guido Chelazzi, Marco Vannini, 2013-12-20 The NATO Advanced Research Workshop on Behavioural Adaptation to Intertidal Life held in Castiglioncello Italy May 1987 was attended by 50 participants most of whom presented requested lectures It was perhaps the first time that specialists of various animal groups from cnidarians to birds were able to meet and discuss the importance of behavioural adaptation to this peculiar sometimes very harsh environment But the taxonomic barrier is not the only one which the meeting attempted to overcome Lately the research on intertidal biology has spread from pure taxonomy and static analysis of community structure to such dynamic aspects as intra and interspecific relationships and physiological

mechanisms aimed at avoiding stress and exploitation of limited resources This increasing interest stems not only from an inclination for this particular ecological system and some of its typical inhabitants but also from the realization that rocky and sandy shore communities are suitable models for testing and improving some global theories of evolutionary biology behavioural ecology and sociobiology The number of eco physiological and eco ethological problems emerging from the study of intertidal animals is fascinatingly large and a complete understanding of this environment cannot be reached using a strictly reductionistic or a pure holistic approach **Mercantile Navy List and Maritime Directory** ,1881 *Official*
