Who's Who in Fluorescence 2009 Book:

Fluorescence In Situ Hybridization (FISH) - Application Guide Thomas Liehr, 2008-11-26 This book is a unique source of information on the present state of the exciting field of molecular cytogenetics and how it can be applied in research and diagnostics. The basic techniques of fluorescence in situ hybridization and primed in situ hybridization (PRINS) are outlined. The multiple approaches and probe sets that are now available for these techniques are described and applications of them are presented in 36 chapters by authors from ten different countries around the world. The book not only provides the reader with basic and background knowledge on the topic but also gives detailed protocols that show how molecular cytogenetics is currently performed by specialists in this field. The FISH Application Guide initially provides an overview of the historical development of molecular cytogenetics, its basic procedures, the equipment required and probe generation. The book then describes tips and tricks for making different tissues available for molecular cytogenetic studies. These are followed by chapters on various multicolor FISH probe sets, their availability and their potential for use in combination with other approaches. The possible applications that are shown encompass the characterization of marker chromosomes, cryptic cytogenetic aberrations and epigenetic changes in humans by interphase and metaphase cytogenetics, studies of nuclear architecture as well as the application of molecular cytogenetics to zoology, botany and microbiology.

Advanced Fluorescence Reporters in Chemistry and Biology I Alexander P. Demchenko, 2010-09-08 Fluorescence reporter is the key element of any sensing or imaging technology. Its optimal choice and implementation is very important for increasing the sensitivity, precision, multiplexing power and also the spectral, temporal and spatial resolution in different methods of research and practical analysis. Therefore, design of fluorescence reporters with advanced properties is one of the most important problems. In this volume, top experts in this field provide advanced knowledge on the design and properties of fluorescent dyes. Organic dyes were the first fluorescent materials used for analytical purposes and we observe that they retain their leading positions against strong competition of new materials: conjugated polymers, semiconductor nanocrystals and metal chelating complexes. Recently, molecular and cellular biology got a valuable tool of organic fluorophores synthesized by cell machinery and incorporated into green fluorescent protein and its analogs. Demands of various fluorescence techniques operating in spectral anisotropy and time domains require focused design of fluorescence reporters well adapted to these techniques. Near IR spectral range becomes more and more attractive for various applications and new dyes emitting in this range are strongly requested. Two-photon fluorescence has become one of the major tools in bioimaging and fluorescence reporters well adapted to this technique are in urgent need. These problems cannot be solved without the knowledge of fundamental principles of dye design and of physical phenomena behind their fluorescence response.

Who's Who in Fluorescence 2009 Chris D. Geddes, 2009-04-02 The Who's Who in Fluorescence 2009 is the 7th volume of the Who's Who series. The previous six volumes (2003-2008) have been very well received by the fluorescence community with 1000s of

copies being distributed around the world through conferences and workshops as well as through internet book sites In addition the Institute of Fluorescence <http://theinstituteoffluorescence.com> mailed 100 s of copies of the 2008 volume to contributors around the world This new 2009 volume features some 419 entries from no fewer than 41 countries worldwide as compared to 418 entries 38 different countries in 2008 and 405 entries in the 2007 volume respectively We have received 29 new entries this year and deleted 25 entries that were not updated by contributors from past years In 2008 129 AIM numbers were submitted as compared to 106 in 2007 This year the number has risen again to 136 AIM numbers submitted This year we also see the introduction of the h index number listing a publication statistic provided by the Thompson s ISI Web of Science Some 42 contributors provided their h numbers In 2009 we also see a continued and strong company support in light of the current world economic climate which will enable us to further disseminate the volume in 2009 2010 In this regard we especially thank the instrumentation companies for their continued support where without their financial contributions it is likely that the volume would not be the success it is today
