

The Statistics of Inheritance

How can statistics help predict the traits of offspring?

Why?

The randomization of alleles from the parents' genetic material is essential to the survival and evolution of a species. If the combinations of alleles that make up the genetic material in a zygote are truly random, the laws of statistics can be used to predict what traits the offspring will have. This activity starts with a review of Punnett squares, which is one way to make predictions about simple allele combinations. Statistics will then be used to make mathematical predictions about the genotypes of offspring.

Model 1 – Punnett Squares

1. Consider the beetle species in Model 1.

a. How many phenotypes for exoskeleton color are exhibited in the population?

2 phenotypes

b. How many genotypes for exoskeleton color are exhibited in the population?

3 genotypes

2. According to Model 1, which allele, B or b, is the dominant exoskeleton color allele? Justify your answer with specific evidence from Model 1.

Upper case b would be the dominate because those who have the B allele have the darker phenotype.

Castilla,2025-09-02 Meritocracy the idea that

individuals should be rewarded based on their talent and hard work is one of the most widely celebrated ideals in education business and government It shapes how organizations recruit evaluate and promote promising a fair system where the best rise to the top But meritocracy has increasingly come under criticism for deepening inequality and reinforcing bias How did a once progressive ideal meant to level the playing field end up contributing to unfairness and privilege What happens when

organizations treat merit as their guiding principle without questioning how it is defined or applied. Most importantly, how can today's leaders recognize and fix what's gone wrong? In *The Meritocracy Paradox*, Emilio J. Castilla offers timely new answers to these fundamental questions. He analyzes the structure and culture of meritocracy inside organizations, providing real-world examples from hiring and merit-based bonuses in companies to admissions decisions at elite universities to show how personal biases and social barriers can undermine the values and outcomes these systems are meant to uphold. Castilla provides practical, research-backed frameworks to help organizations achieve true fairness and opportunity for all. Drawing on successful data-based interventions, he presents concrete strategies for improving recruitment, selection, evaluation, promotion, and compensation processes, revealing how motivated leaders can identify and correct shortcomings with cost-effective, targeted solutions that deliver proven results. *The Meritocracy Paradox* is essential reading for anyone seeking to understand and improve the intersection of merit, fairness, and equal opportunity in organizations. Closing the tax gap Great Britain: Parliament: House of Commons: Treasury Committee, 2012-03-09. This Treasury Committee report considers HM Revenue Customs' past work in ensuring tax compliance and concludes that while progress has been made, there is still work to be done. HMRC defines the tax gap as the difference between tax collected and the tax that should be collected, the theoretical liability. The theoretical tax liability represents the tax that would be paid if all individuals and companies complied with both the letter of the law and HMRC's interpretation of the intention of Parliament in setting law, referred to as the spirit of the law. Enabling voluntary compliance is the most efficient way of closing the tax gap, and HMRC must ensure that all those who wish to comply with their tax obligations are able to do so. Part of the process of encouraging voluntary compliance is demonstrating that HMRC treats all taxpayers fairly, whether they are individuals, small businesses, or large corporations. The tax system should be simplified to make compliance easier. HMRC's recent announcement of ways it intends to improve its processes for settling tax disputes is a step forward in the context of wider questions needing to be answered about the accountability structures of HMRC. HMRC's calculation of the tax gap is flawed and risks focusing the minds of its employees on the wrong task: maximising revenue at all cost, rather than ensuring that all taxpayers pay the right amount of tax.
