Psychological Assessment and Report Writing Karen Goldfinger,Andrew M. Pomerantz,2013-04-09 Outlining a step by step assessment model Psychological Assessment and Report Writing Second Edition covers five key topics central to psychological assessment understanding the context of a referral determining what data is needed to answer referral questions gathering the data integrating the data and communicating the findings Authors Karen Goldfinger and Andrew M Pomerantz review each facet of psychological assessment and report writing providing how to instructions and alerting readers to a myriad of issues they must consider when conducting assessments in clinical forensic or educational environments Filled with varied case examples that promote interest and meet instructional requirements including one detailed case study that recurs throughout multiple chapters the book uses sidebars and question and answer sections to encourage readers to consider their own case material and use critical thinking skills as they review each section of the model *Handbook of Psychiatric Measures* A. John Rush Jr.,Michael B. First,Deborah Blacker,2009-03-20 The Handbook of Psychiatric Measures offers a concise summary of key evaluations that you can easily incorporate into your daily practice The

measures will enhance the quality of patient care assisting you both in diagnosis and assessment of outcomes. Comprising a wide range of methods available for assessing persons with mental health problems, the Handbook contains more than 275 rating methods from the Abnormal Involuntary Movement Scale to the Zung Self Rating Depression Scale. In this fully revised edition, more than 40 measures have been added both to the book and to the accompanying CD ROM. The Handbook features thoroughly examined and revised measures that provide the most relevant and timely information for clinicians. New measures that empirically provide better patient evaluation. Updated costs, translations, and contact information for each measure. This handy compendium includes both diagnostic tools and measures of symptoms, function, and quality of life, medication side effects, and other clinically relevant parameters. It focuses on measures that can be most readily used in either clinical practice or research. Most of the measures are designed to improve the reliability and validity of patient assessment over what might be accomplished in a standard clinical interview. The measures also demonstrate that the use of formal measures can improve the collection, synthesis, and reporting of information as compared with the use of unstructured examinations. Seventeen disorder-specific chapters, organized in DSM-IV-TR order, include measures for Disorders of childhood and adolescence, Cognitive disorders, Sexual dysfunction, Eating disorders, Sleep disorders, Aggression, and much more. The discussion of each measure includes goals, description, practical issues, psychometric properties, and clinical utility, followed by references and suggested readings. This revised edition includes updated measure descriptions, new measure variants, and research, and newly selected measures particularly appropriate to the domain of discussion. As a clinical tool, this book describes how, when, and to what purpose measures are used; points out practical issues to consider in choosing a measure for clinical use; addresses limitations in the use of measures, including ethnic, cultural, and socioeconomic factors that influence their interpretation. Use of this special resource is further enhanced by a CD ROM containing the full text of more than 150 of these measures, an invaluable aid for reference and clinical decision making.
