## **Wilderburbs Communities On Nature S Edge Weyerhaeuser Environmental Books:**

**Wilderburbs** Lincoln Bramwell, 2014-09-01 Since the 1950s the housing developments in the West that historian Lincoln Bramwell calls wilderburbs have offered residents both the pleasures of living in nature and the creature comforts of the suburbs Remote from cities but still within commuting distance nestled next to lakes and rivers or in forests and deserts and often featuring spectacular views of public lands wilderburbs celebrate the natural beauty of the American West and pose a vital threat to it Wilderburbs tells the story of how roads and houses and water development have transformed the rural landscape in the West Bramwell introduces readers to developers homeowners and government regulators all of whom have faced unexpected environmental problems in designing and building wilderburb communities including unpredictable water supplies threats from wildfires and encounters with wildlife By looking at wilderburbs in the West especially those in Utah Colorado and New Mexico Bramwell uncovers the profound environmental consequences of Americans desire to live in the wilderness

**Environmental Justice in Postwar America** Christopher W. Wells, 2018-07-16 In the decades after World War II the American economy entered a period of prolonged growth that created unprecedented affluence but these developments came at the cost of a host of new environmental problems Unsurprisingly a disproportionate number of them such as pollution emitting factories waste handling facilities and big infrastructure projects ended up in communities dominated by people of color Constrained by long standing practices of segregation that limited their housing and employment options people of color bore an unequal share of postwar America s environmental burdens This reader collects a wide range of primary source documents on the rise and evolution of the environmental justice movement The documents show how environmentalists in the 1970s recognized the unequal environmental burdens that people of color and low income Americans had to bear yet failed to take meaningful action to resolve them Instead activism by the affected communities themselves spurred the environmental justice movement of the 1980s and early 1990s By the turn of the twenty first century environmental justice had become increasingly mainstream and issues like climate justice food justice and green collar jobs had taken their places alongside the protection of wilderness as environmental issues Environmental Justice in Postwar America is a powerful tool for introducing students to the US environmental justice movement and the sometimes tense relationship between environmentalism and social justice For more information visit the editor s website <http://cwells.net>

**PostwarEJ** **Cultivating Nature** Sarah R. Hamilton, 2018-04-15 Winner of the 2019 Turku Book Award from the European Society for Environmental History The Albufera Natural Park an area ten kilometers south of Valencia that is widely regarded as the birthplace of paella has long been prized by residents and visitors alike Since the twentieth century the disparate visions of city dwellers farmers fishermen scientists politicians and tourists have made this working landscape a site of ongoing conflict over environmental conservation in Europe the future of Spain and Valencian identity In Cultivating Nature Sarah Hamilton explores the Albufera s contested lands and waters which have supported and been transformed by human

activity for a millennium in order to understand regional national and global social histories She argues that efforts to preserve biological and cultural diversity must incorporate the interests of those who live within heavily modified and long exploited ecosystems such as the Albufera de Valencia Shifting between local struggles and global debates this fascinating environmental history reveals how Franco's dictatorship Spain's integration with Europe and the crisis in European agriculture have shaped the Albufera its users and its inhabitants

**Seeds of Control** David Fedman, 2020-07-23

Conservation as a tool of colonialism in early twentieth century Korea Japanese colonial rule in Korea 1905 1945 ushered in natural resource management programs that profoundly altered access to and ownership of the peninsula's extensive mountains and forests Under the banner of forest love the colonial government set out to restructure the rhythms and routines of agrarian life targeting everything from home heating to food preparation Timber industrialists meanwhile channeled Korea's forest resources into supply chains that grew in tandem with Japan's imperial sphere These mechanisms of resource control were only fortified after 1937 when the peninsula and its forests were mobilized for total war In this wide ranging study David Fedman explores Japanese imperialism through the lens of forest conservation in colonial Korea a project of environmental rule that outlived the empire itself Holding up for scrutiny the notion of conservation **Seeds of Control** examines the roots of Japanese ideas about the Korean landscape as well as the consequences and aftermath of Japanese approaches to Korea's greenification Drawing from sources in Japanese and Korean Fedman writes colonized lands into Japanese environmental history revealing a largely untold story of green imperialism in Asia

**Seismic City** Joanna L.

Dyl, 2017-10-02 On April 18 1906 a 7.8 magnitude earthquake shook the San Francisco region igniting fires that burned half the city The disaster in all its elements earthquake fires and recovery profoundly disrupted the urban order and challenged San Francisco's perceived permanence The crisis temporarily broke down spatial divisions of class and race and highlighted the contested terrain of urban nature in an era of widespread class conflict simmering ethnic tensions and controversial reform efforts From a proposal to expel Chinatown from the city center to a vision of San Francisco paved with concrete in the name of sanitation the process of reconstruction involved reenvisioning the places of both people and nature In their zeal to restore their city San Franciscans downplayed the role of the earthquake and persisted in choosing patterns of development that exacerbated risk In this close study of the 1906 San Francisco earthquake Joanna L Dyl examines the decades leading up to the catastrophic event and the city's recovery from it Combining urban environmental history and disaster studies **Seismic City** demonstrates how the crisis and subsequent rebuilding reflect the dynamic interplay of natural and human influences that have shaped San Francisco

**Debating Malthus** Robert J. Mayhew, 2022-05-03

Introducing students to the place of population in environmental thinking For centuries thinking about the earth's increasing human population has been tied to environmental ideas and political action This highly teachable collection of contextualized primary sources allows students to follow European and North American discussions about intertwined and evolving

concepts of population resources and the natural environment from early contexts in the sixteenth century through to the present day Edited and introduced by Robert J Mayhew a noted biographer of Thomas Robert Malthus whose Essay on the Principle of Population 1798 excerpted here is an influential and controversial take on the topic this volume explores themes including evolution eugenics war social justice birth control environmental Armageddon and climate change Other responses to the idea of new population bombs are represented here by radical feminist work by Indigenous views of the population environment nexus and by intersectional race gender approaches By learning the patterns of this discourse students will be better able to critically evaluate historical conversations and contemporary debates      **Making Climate Change History**

Joshua P. Howe, 2017-04-03 This collection pulls together key documents from the scientific and political history of climate change including congressional testimony scientific papers newspaper editorials court cases and international declarations Far more than just a compendium of source materials the book uses these documents as a way to think about history while at the same time using history as a way to approach the politics of climate change from a new perspective Making Climate Change History provides the necessary background to give readers the opportunity to pose critical questions and create plausible answers to help them understand climate change in its historical context it also illustrates the relevance of history to building effective strategies for dealing with the climatic challenges of the future      Nuclear Reactions James W.

Feldman, 2016-11-01 Nuclear Reactions explores the nuclear consensus that emerged in post World War II America characterized by widespread support for a diplomatic and military strategy based on nuclear weapons and a vision of economic growth that welcomed nuclear energy both for the generation of electricity and for other peaceful and industrial uses Unease about the environmental consequences of nuclear energy and weapons development became apparent by the early 1960s and led to the first challenges to that consensus The documents in this collection address issues such as the arms race mutually assured destruction the emergence of ecosystems ecology and the environmental movement nuclear protests and climate change They raise questions about how nuclear energy shaped and continues to shape the contours of postwar American life These questions provide a useful lens through which to understand the social economic and environmental tradeoffs embedded within American choices about the use and management of nuclear energy      *Communist Pigs* Thomas Fleischman, 2020-06-30 The pig played a key role in the German Democratic Republic's attempts to create a modern industrial food system built on communist principles By the mid 1980s East Germany produced more pork per capita than West Germany and the UK while also suffering the unintended consequences of manure pollution animal disease and rolling food shortages The pig is a highly adaptive animal and Thomas Fleischman uncovers three types of pig that played roles in this history the industrial pig remade to suit the conditions of factory farming the wild boar whose overpopulation was a side effect of agricultural development and the garden pig reflective of the regime's growing acceptance of private farming within the planned economy Fleischman chronicles East Germany's journey from family farms to factory farms explaining how

communist principles shaped the adoption of industrial agriculture practices More broadly Fleischman argues that agriculture under communism came to reflect the practices of capitalist agriculture and that the pork industry provides a clear illustration of this convergence His analysis sheds light on the causes of the country's environmental and political collapse in 1989 and offers a warning about the high cost of cheap food in the present and future Communist Pigs was a finalist for the Turku Book Award European Society for Environmental History **Smell Detectives** Melanie A.

Kiechle, 2017-07-18 What did nineteenth century cities smell like And how did odors matter in the formation of a modern environmental consciousness Smell Detectives follows the nineteenth century Americans who used their noses to make sense of the sanitary challenges caused by rapid urban and industrial growth Melanie Kiechle examines nuisance complaints medical writings domestic advice and myriad discussions of what constituted fresh air and argues that nineteenth century city dwellers anxious about the air they breathed attempted to create healthier cities by detecting and then mitigating the most menacing odors Medical theories in the nineteenth century assumed that foul odors caused disease and that overcrowded cities filled with new and stronger stinks were synonymous with disease and danger But the sources of offending odors proved difficult to pinpoint The creation of city health boards introduced new conflicts between complaining citizens and the officials in charge of the air Smell Detectives looks at the relationship between the construction of scientific expertise on the one hand and common sense the olfactory experiences of common people on the other Although the rise of germ theory revolutionized medical knowledge and ultimately undid this form of sensory knowing Smell Detectives recovers how city residents used their sense of smell and their health concerns about foul odors to understand adjust to and fight against urban environmental changes Native Seattle Coll Thrush, 2017-03-01 This updated edition of Native Seattle

brings the indigenous story to the present day and puts the movement of recognizing Seattle's Native past into a broader context Native Seattle focuses on the experiences of local indigenous communities on whose land Seattle grew accounts of Native migrants to the city and the development of a multi tribal urban community as well as the role Native Americans have played in the narrative of Seattle **Defending Giants** Darren Frederick Speece, 2016-10-14 Giant redwoods are American icons paragons of grandeur exceptionalism and endurance They are also symbols of conflict and negotiation remnants of environmental battles over the limits of industrialization profiteering and globalization Since the middle of the nineteenth century logging operations have eaten away at the redwood forest particularly areas covered by ancient giant redwoods Today such trees occupy a mere 120 000 acres Their existence is testimony to the efforts of activists to rescue some of these giants from destruction Very few conservation battles have endured longer or with more violence than on the North Coast of California behind what locals call the Redwood Curtain Defending Giants explores the long history of the Redwood Wars focusing on the ways rural Americans fought for control over both North Coast society and its forests Activists defended these trees not only because the redwood forest had dwindled in size but also because by the late twentieth century the local

economy was increasingly dominated by multinational corporations The resulting conflict the Redwood Wars pitted workers and environmental activists against the rising tide of globalization and industrial logging in a complex war over endangered species sustainable forestry and of course the fate of the last ancient redwoods Activists perched in trees and filed lawsuits while the timber industry led by Pacific Lumber fought the lawsuits and used their power to halt reform efforts Ultimately the Clinton administration sidestepped Congress and the courts to negotiate an innovative compromise In the process the Redwood Wars transformed American environmental politics by shifting the balance of power away from Congress and into the hands of the executive branch

**The City Is More Than Human** Frederick L. Brown, 2016-10-03 Winner of the 2017 Virginia Marie Folkins Award Association of King County Historical Organizations AKCHO Winner of the 2017 Hal K Rothman Book Prize Western History Association Seattle would not exist without animals Animals have played a vital role in shaping the city from its founding amid existing indigenous towns in the mid nineteenth century to the livestock friendly town of the late nineteenth century to the pet friendly livestock averse modern city When newcomers first arrived in the 1850s they hastened to assemble the familiar cohort of cattle horses pigs chickens and other animals that defined European agriculture This in turn contributed to the dispossession of the Native residents of the area However just as various animals were used to create a Euro American city the elimination of these same animals from Seattle was key to the creation of the new middle class neighborhoods of the twentieth century As dogs and cats came to symbolize home and family Seattleites relationship with livestock became distant and exploitative demonstrating the deep social contradictions that characterize the modern American metropolis Throughout Seattle s history people have sorted animals into categories and into places as a way of asserting power over animals other people and property In *The City Is More Than Human* Frederick Brown explores the dynamic troubled relationship humans have with animals In so doing he challenges us to acknowledge the role of animals of all sorts in the making and remaking of cities
