Wildfires, 2004 The 2000 and 2002 fire seasons were by most standards among the worst in the past Many argue that the threat of severe wildfires has grown because of unnaturally high fuel loads e.g. dense undergrowth undergrown and dead trees raising concerns about damage to property and homes in the wildland urban interface WUI homes in or near forests Debates about fire control and protection including funding and fuel treatment e.g. thinning and prescribed burning have focused on national forests and other federal lands but nonfederal lands are also at risk This new book explores the latest issues dealing with wildfires the consequences that they sow and what means are being used to prevent and protect the environment and the local populations
