

## Proper Operation

### DRIVING A NEW "JEEP"

Do not use your "Overhaul Plug" faster than 40 miles an hour (40 Km. H.) for the first 100 miles (160 Km. H.) or it will ruin the bearings on the main gear shaft. If the vehicle is operated at high speeds while new oil used for heavy greasing the bearings, the clutch shaft joint might possibly become loosened, resulting in several shocks, vibrations or burning bearings. Do not use when the vehicle is standing still. If the vehicle is not properly lubricated, use liberally in small and cold. Be sure to have your 1941-42 Dealer inspect your vehicle at the end of 1000 miles (1600 Km.) or equivalent usage and again at 2000 miles (3200 Km.).

### TO MAKE VEHICLE READY.

Fill the radiator with clean, soft water.

Put gasoline in the tank.

Put the oil covers through the filler pipe at right side of engine until the oil has "seen" each valve. "FUEL" (See "Lubrication Chart", Page 16).

Supply 2 parts required, lubrication with oil or lubricant.

See that the tires have proper pressure (See Tire Pressure, Page 10).

Adjust the rear view mirror to correct position for driver. If adequate view is not obtainable, the mirror may be adjusted by loosening the screw through the mounting bracket or by tilting in the ball and socket connection.

### CONTROLS AND SWITCHES

The main controls and switches are shown in Fig. 1.

The horn is operated by pressing the button located at the top center of the steering wheel.

The main light switch No. 17 controlling all lights is conveniently located on the instrument panel to the left of the steering post. It is in the "glow" position—pull all the way out for the "full on" position, half-way for "park" and all the way in is the "off" position.

In addition to the main light switch, the high and low beams of the head lamps are controlled by a selector foot switch, located on the toe board to the left of the clutch pedal. Pressing and releasing the switch button, with the foot, alternately changes the beam from high to low and vice versa.

### TO START ENGINE

Put the transmission gearshift lever No. 12, Fig. 1 in neutral. Place the transfer case low and high shift lever No. 17 in direct gear or in the rear position and disengage the front axle drive by placing the shift lever No. 16 in the forward position.

Push the clutch control button No. 8 and back of the seat belt which also opens the throttle valve.

Place the key in ignition lock No. 20 and turn it to the right, closing the ignition circuit.

Disengage the clutch by depressing the pedal.

Depress the foot starting switch No. 14.

Should the engine fail to start at once, pull the choke all the way out and press the starting switch. When the engine starts, push the choke to about one-third of the way. But the choke control at the foot operating position until as the engine warms up, push the choke all the way in. Do not run with the choke out as fast as started and the engine stalls.

Should the engine fail to start, see the "Troubleshooting Chart", Page 14.
