Voice Studies Rockford Sansom, 2024-11-11 Practitioner Research in Voice Studies aims to support the artist scholar who wishes to design and publish research in voice. The book is useful for the novice who wants tangible tools to begin and for the more experienced researcher who wants varying perspectives on how voice scholarship has evolved. The book contains three sections: Conducting Practitioner Research in Voice Studies, Getting Started Practitioner Research Examples. The first two sections outline major themes, debates, and research approaches in the field, and many chapters offer step-by-step guides and tips. The final section presents example research articles that highlight numerous methods, including qualitative, quantitative, mixed method, action research, performance as research, practice as research, literature review, narrative review, and other kinds of multidisciplinary practices. This ambitious project includes leading international figures who write in a scholarly and accessible manner. Utilizing research ideas and examples from a variety of voice disciplines, this book will be of interest to those studying voice, speech, singing, acting, public speaking, voice science, communication, music, theatre, and performance. Those writing a dissertation or thesis may also draw from this text. Articles from this book were originally published in the *Voice and Speech Review* journal. *Speaking, Stammering, Singing, Shouting* Josephine Hoegaerts, 2025-08-26 What was considered a good, normal, or healthy voice in the nineteenth century? In 1854, singing master Manuel Garcia became the first person to see the vocal cords at work in a human throat. Less than a decade later, surgeon Paul Broca identified what he called a speech center in the brain. The almost simultaneous invention of the laryngoscope and the discovery of Broca's area present important turning points for how medical, musical, and other experts understood how the human voice works. These developments did not occur in a vacuum, however. In *Speaking, Stammering, Singing, Shouting*, Josephine Hoegaerts describes the ambitious attempts throughout the nineteenth century to observe, understand, and manage human voices, as well as the host of more traditional, domestic, and stereotypical beliefs about the voice that continued to exist alongside these new insights. She peers into the stammering therapist's office, over the singing teacher's shoulder, and occasionally into the laryngoscope to see how something so simple—the sound Europeans produced when they opened their mouths—changed over the course of the nineteenth century. Combining insights from medical and musical histories with methods from the fields of sound studies and the history of experience, Hoegaerts traces how people imagined human voices in the nineteenth century and how they used them. Rather than focusing on the great singers and orators of the age, the book looks at the mundane, daily practices of singers, speakers, and stammerers, and the people who trained and studied them. What did it take, according to all these increasingly specialized professionals, to have a normal voice in nineteenth-century Europe? *Musical News and Herald*, 1922
