

1.0 CONSUMER DEMAND THEORY/ CONSUMER BEHAVIOR

Consumer behavior theory is concerned with how consumers make decisions about consumption of commodities given their prices and consumer's limited income so as to maximise utility.

WHO IS A CONSUMER?

A consumer is a decision making unit about consumption.

PRINCIPLES OF CONSUMERS DEMAND THEORY

- (a) Limited income (scarcity) necessitates choice.
- (b) Consumers make decisions purposefully. That is consumers are careful shoppers.
- (c) One good or service can be substituted for another.
- (d) Consumers make decisions without perfect information.
- (e) The law of diminishing marginal utility applies to consumer behavior.

THEORIES OF CONSUMER BEHAVIOR

a) Cardinal/Neo-classical utility theory

The theory holds that utility derived from consumption of a good or service is measurable subjectively using cardinal numbers (e.g. 1, 2, 3 ...) by units of measurements called utils.

Consumer equilibrium

Analysis of consumer equilibrium entails answering the question "How does a consumer allocate his money income among the various goods and services he/she consumes to maximize utility?"

The cardinal utility approach to consumer's equilibrium is based on the following assumption,

- Consumer is assumed to be rational.
- Consumer possesses perfect knowledge of obtainable utilities.
- Marginal utility of money is constant at whatever the level of income and each unit of money has utility equal to one.
- Units of commodities are homogeneous.
- Commodities are divisible.
- Utility is additive- If a basket of goods and services consumed by a consumer contains n items and their quantities are, $X_1, X_2, X_3, \dots, X_n$, the utility function of the consumer may be expressed as,

the utility function of the consumer may be expressed as,

$$U = f(X_1, X_2, X_3, \dots, X_n).$$

Given the utility function, the TU obtained from n items may be expressed as,

$$TU_n = U_1(X_1) + U_2(X_2) + U_3(X_3) + \dots + U_n(X_n).$$

-

Consumer Equilibrium-The General Case (Several Commodity Case)

Suppose a consumer consumes only two commodities one and two with quantities X_1 and X_2 .

The corresponding utility function is,

$$U = f(X_1, X_2) \quad [1]$$

To buy these commodities, the consumer will pay prices P_1 and P_2 for X_1 and X_2 respectively.

To maximise utility,

In recent years there have been significant developments of offshore wind technology and industry with bottom fixed wind turbines fully commercialized and floating wind turbines entering the market. Reducing Operational Expenditure OPEX for offshore wind turbines by improving the wind turbine availability based on predictive maintenance of the turbine critical components can contribute substantially to the reduction of unexpected maintenance and costs and the development of more sustainable offshore wind energy in future. For this purpose digital twin models are an enabler.

Title List of Documents Made Publicly Available U.S. Nuclear Regulatory Commission, 1986 **Structural Integrity of Offshore Wind Turbines** Transportation Research Board, 2011-09-02

TRB Special Report 305 Structural Integrity of Offshore Wind Turbines Oversight of Design Fabrication and Installation explores the U S Department of the Interior's Bureau of Ocean Energy Management Regulation and Enforcement BOEMRE approach to overseeing the development and safe operation of wind turbines on the outer continental shelf with a focus on structural safety. The committee that developed the report recommended that in order to facilitate the orderly development of offshore wind energy and support the stable economic development of this nascent industry the United States needs a set of clear requirements that can accommodate future design development. The report recommends that BOEMRE develop a set of requirements that establish goals and objectives with regard to structural integrity environmental performance and energy generation. The committee found that the risks to human life and the environment associated with offshore wind farms are substantially lower than for other industries such as offshore oil and gas because offshore wind farms are primarily unmanned and contain minimal quantities of hazardous substances. This finding implies that an approach with significantly less regulatory oversight may be taken for offshore wind farms. Under this approach industry would be responsible for proposing sets of standards guidelines and recommended practices that meet the performance requirements established by BOEMRE. The domestic industry can build on standards guidelines and practices developed in Europe where the offshore wind energy is further developed but will have to fill gaps such as the need to address wave and wind loadings encountered in hurricanes. The report also includes findings and recommendations about the role that certified verification agents third party evaluators can play in reviewing packages of standards and project specific proposals.
