Lecithin Israel Hanin,2013-11-11 Recently there has been tremendous scientific interest in the role of phospholipids and particularly phosphatidylcholine lecithin in a variety of biological processes These include the involvement of phosphatidylcholine in biological membranes as a component of plasma lipoprotein as a transporter of choline in the body and also as a reserve and possibly only source of unesterified choline Moreover numerous clinical studies have recently been conducted to evaluate the possible uses of externally supplied lecithin in the treatment of some intractable neuropsychiatric disorders e g tardive dyskinesia Alzheimer's disease etc and other conditions e g hypercholesterolemia Results to date are encouraging yet equivocal This is due in part to the fact that the field of phospholipid methodology is highly complex There is

much confusion in the literature and many ambiguities still remain in the interpretation of experimental findings This is particularly so for phenomena involving phospholipid function in the central nervous system This book incorporates the proceedings of the Fourth International Colloquium on Lecithin which took place in Chicago Illinois USA on September 15 17 1986 The purpose of this colloquium was to review in a comprehensive manner basic principles as well as current information about the technology biochemistry physiology and therapeutic potential of lecithin Over 108 individuals from all over the world participated in the sessions The meeting was subdivided into oral presentations and panel discussions see Table of Contents It was sponsored and financed by the Lucas Meyer GmbH Hamburg for which the editors are most grateful
