Running an airline business in the current global environment is not meant for the faint-hearted person or novice. The operation is complex and risky. In *The Essentials of Airplane Maintenance*, author Michael Loong provides practical information to the new and practicing engineers, engineering and maintenance managers and CEOs of airlines. His philosophical approach to solving practical problems is enlightening and pragmatic, not only for the airlines but also for the aviation suppliers. In order to achieve reliability and safe operation of airplanes, he advocates applying economic theory in managing engineering repair and replacement procedures instead of following the book blindly. It is a must-read book to achieve success in the dynamic complex world of airline operations.

American Firms in Europe Hubert Bonin, Ferry de Goey, 2009. The Americanization of Europe and the strategic initiatives of American firms abroad have been well studied. The expansion of American firms in Europe, however, lacked a comprehensive study. This book gathers the works of two dozen economic and business historians from across Europe, preceded by Mira Wilkins' comparative essay. The collection addresses the timetable and pace of American direct investment in Europe, the patterns followed in each country according to the specificities of each industry and service sector, and the strategies followed by the different firms. The studies go beyond the facts, scrutinizing the immaterial aspects of this business history, especially European perceptions of American firms and the essential stakes of corporate images and identities. The Europeanization of American firms is a key issue, including social relations, management, commercial policies, brand image, connections, and embeddedness. The authors gauge the reaction of public authorities and lobbies, industrialists, and trade unions. Graphs and tables provide data, while overviews of ads published by American affiliates fuel analyses of consumer perception.

Cars, **Animal Castration** Alexandre François Augustin Liautard, 1884 *Animal Castration* Liautard, 1884 **Automotive Engineering**

International, 2007 **Automotive Electricity** Joseph Beretta, 2013-03-04. Since the beginning of the century, electrical engineering technologies and applications have pervaded daily life and are present in the majority of everyday products, tools, and appliances. Increasingly, these applications are becoming more prevalent in the automotive vehicle and products market. While change in this field has been relatively slow over the last ten years, the pace of change is now beginning to accelerate, and we are witnessing a wave driven by regulatory constraints and market laws which are sweeping away the last bastions of resistance. This book discusses both the historical and scientific issues surrounding the application of electrical technology in the automotive drives field, as well as potential future developments such as hybrid vehicles and fuel cells. In the current context of energy conservation, pollution prevention, and carbon control, this book will provide an important and timely examination of a potentially enormous new market.
