Of all philosophers of the 20th century few built more bridges between academic disciplines than Karl Popper. He contributed to a wide variety of fields in addition to the epistemology and the theory of scientific method for which he is best known. This book illustrates and evaluates the impact both substantive and methodological that Popper has had in the natural and mathematical sciences. The topics selected include quantum mechanics, evolutionary biology, cosmology, mathematical logic, statistics, and cognitive science. The approach is multidisciplinary, opening a dialogue across scientific disciplines and between scientists and philosophers.

**Probability, Objectivity and Evidence** F. C. Benenson, 2025-08-29. First published in 1984 in *Probability, Objectivity and Evidence*, the author claims that the theory of probability provides a single correct analysis of probability and that the concept of probability employed in science can best be understood as that of inductive probability. To do so it is necessary to show both how the logical relation theory of probability can be given a formulation sufficiently objective for the purposes of science and how other attempts to explain the objective character of probability judgements are unsatisfactory. These and related questions occupy the first five chapters of the book. The last two chapters contain more or less independent material on the principle of indifference. The author argues that in essence the logical relation theory alone can explain how we have objective knowledge of probabilities and so it alone provides a viable system translation of the concept of probability used in science. This is a must read for students of logic and philosophy. Truthlikeness I.

Niiniluoto, 2012-12-06. The modern discussion on the concept of truthlikeness was started in 1960. In his influential *Word and Object* W. V. O. Quine argued that Charles Peirce's definition of truth as the limit of inquiry is faulty for the reason that the notion nearer than is only defined for numbers and not for theories. In his contribution to the 1960 International Congress for Logic, Methodology and Philosophy of Science at Stanford, Karl Popper defended the opposite view by defining a comparative notion of verisimilitude for theories, which was originally introduced by the Ancient sceptics to moderate their radical thesis of the inaccessibility of truth. But soon verisimilitudo, indicating likeness to the truth, was confused with probabilitas, which expresses an opiniotative attitude weaker than full certainty. The idea of truthlikeness fell in disrepute also as a result of the careless, often confused and metaphysically loaded way in which many philosophers used and still use such concepts as degree of truth, approximate truth, partial truth, and approach to the truth. Popper's great achievement was his insight that the criticism against truthlikeness by those who urge that it is meaningless to speak about closeness to truth is more based on prejudice than argument.

**Political Philosophy After 1945** Alan Haworth, 2022-11-10. By the mid twentieth century interest in political philosophy had dwindled, with one writer even pronouncing the subject dead. Things were to change in 1971 when the subject experienced a renaissance with the publication of John Rawls's *A Theory of Justice*. The story didn't end with Rawls, however, as other avenues through which to approach the subject became available. In *Political Philosophy After 1945*, Alan Haworth tells the story of political philosophy from the mid twentieth century to the early twenty first. First he considers why the subject should have become marginalised.

by mainstream philosophical movements such as logical positivism and the ordinary language philosophy inspired by Wittgenstein Subsequent chapters explain the fundamentals of Rawls's theory and then compare and contrast his contribution with that of other philosophers from across the political spectrum These are followed by chapters in which alternative approaches are examined There are in depth accounts of works by Hannah Arendt and Alasdair MacIntyre as well as an evaluation of the claim that political philosophy exemplifies the pursuit of a moribund Enlightenment project Throughout the book Haworth strikes a balance between historical perspective and close analysis of major texts and he is careful to emphasise the relevance of theoretical issues to questions which arise beyond theory As such Political Philosophy After 1945 is essential reading for students and scholars of political philosophy but also serves as an introduction for students from across the Humanities and Social Sciences approaching the topic for the first time

**Childhood, Philosophy and Open Society** Chi-Ming Lam, 2013-02-26 The purpose of this book is to develop a theory and practice of education from Karl Popper's non justificationist philosophy for promoting an open society Specifically the book is designed to develop an educational programme for fostering critical thinking in children particularly when they are involved in group discussion The study conducted an experiment to assess the effectiveness of Matthew Lipman's Philosophy for Children P4C programme in promoting Hong Kong Chinese children's critical thinking Forty two Secondary 1 students volunteered for the experiment from whom 28 students were randomly selected and randomly assigned to two groups of 14 each one receiving P4C lessons and the other receiving English lessons The students who were taught P4C were found to perform better in the reasoning test than those who were not to be capable of discussing philosophical problems in a competent way and to have a very positive attitude towards doing philosophy in the classroom It was also found that P4C played a major role in developing the students critical thinking Considering that the construction of children by adults as incompetent in the sense of lacking reason maturity or independence reinforces the traditional structure of adult authority over children in society it runs counter to the goal of fostering critical thinking in children As a way to return justice to childhood and to effectively promote critical thinking in children the present study suggested reconstructing the concept of childhood highlighting the importance of establishing a coherent public policy on promotion of agency in children and also the importance of empowering them to participate actively in research legal and educational institutions
