**Recent Advances in Transthyretin Evolution, Structure and Biological Functions** Samantha J. Richardson, Vivian Cody, 2009-08-09 Since its first description in 1942 in both serum and cerebrospinal fluid transthyretin TTR has had an eventful history including changes in name from prealbumin to thyroxine binding prealbumin to transthyretin as knowledge increased about its functions TTR is synthesised in a wide range of tissues in humans and other eutherian mammals the liver choroid plexus blood cerebrospinal fluid barrier retinal pigment epithelium of the eye pancreas intestine and meninges However its sites of synthesis are more restricted in other vertebrates This implies that the number of tissues synthesising TTR during vertebrate evolution has increased and raises questions about the selection pressures governing TTR synthesis TTR is most widely known as a distributor of thyroid hormones In addition TTR binds retinol binding protein which binds retinol In this way TTR is also involved with retinoid distribution More recently TTR has been demonstrated to bind a wide variety of endocrine disruptors including drugs pollutants industrial compounds heavy metals and some naturally occurring plant avonoids These not only interfere with thyroid hormone delivery in the body but also transport such endocrine disruptors into the brain where they have the potential to accumulate

**Ontogeny and Phylogeny of Brain Barrier Mechanisms** Norman R Saunders ,Helen B Stolp, Shane A Liddelow, 2016-04-15 The brain functions within an internal environment that is determined and controlled by morphological structures and cellular mechanisms present at interfaces between the brain and the rest of the body In vertebrates these interfaces are across cerebral blood vessels blood brain barrier choroid plexuses blood cerebrospinal fluid barrier and pia arachnoid There is a CSF brain barrier in the neuroepithelium lining the ventricular system that is only present in embryos There is now substantial evidence that many brain barrier mechanisms develop early and that in some cases they are functionally more

active and even more specialized compared to adult barriers Therefore barriers in developing brain should be viewed as adapted appropriately for the growing brain and not as is still widely believed immature Considerable advances in our understanding of these barrier mechanisms have come from studies of the developing brain and invertebrates A striking aspect to be highlighted in this special edition is that many of the molecular mechanisms in these very diverse species are similar despite differences in the cellular composition of the interfaces This Frontiers Topic comprises articles in three sections Original studies Reviews and Myths Misconceptions Original articles provide new information on molecular and cellular barrier mechanisms in developing brains of primates including human embryos Brchner et al Ek et al Errede et al rodents Bauer et al Liddelw Strazielle Gherzi Egea Saunders et al Whish et al chick Bueno et al and zebrafish Henson et al as well as studies in drosophila Hindle Bainton De Salvo et al Limmer et al The Reviews section includes evolutionary perspectives of the blood brain and blood CSF barriers Bueno et al Bill Korzh There are also detailed reviews of the current state of understanding of different interfaces and their functional mechanisms in developing brain Bauer et al Strazielle Gherzi Egea Liddelw Richardson et al Errede et al Henson et al Brchner et al and in invertebrates Hindle Bainton De Salvo et al Limmer et al Different aspects of the relationship between properties of the internal environment of the brain and its development are discussed Stolp Molnar Johansson Prasongchean et al A neglected area namely barriers over the surface of the brain during development is also covered Brchner et al Clinically related perspectives on barrier disruption in neonatal stroke are provided by Kratzer et al and other aspects of dysfunction by Morretti et al and by Palmeta et al on the continuing problem of bilirubin toxicity Progress in this field is hampered by many prevailing myths about barrier function combined with methodologies that are not always appropriately selected or interpreted This is covered in the Misconceptions Myths and Methods section including historical aspects and discussion of the paracellular pathway a central dogma of epithelial and endothelial biology Saunders et al and a review of markers used to define brain barrier integrity in development and in pathological conditions Saunders et al Use of inappropriate markers has caused considerable confusion and unreliable interpretation in many published studies Torbett et al deal with the complexities of the new field of applying proteomics to understanding blood brain barrier properties as do Huntley et al with respect to applying modern high throughput gene expression methods Huntley et al The Editorial summarizes the contributions from all authors This includes mention of some the main unanswered but answerable questions in the field and what the impediments to progress may be

**The Neurobiology of Australian Marsupials** Ken Ashwell, 2010-10-14 Australian marsupials represent a parallel adaptive radiation to that seen among placental mammals This great natural experiment has produced a striking array of mammals with structural and behavioural features echoing those seen among primates rodents carnivores edentates and ungulates elsewhere in the world Many of these adaptations involve profound evolutionary changes in the nervous system and occurred in isolation from those unfolding among placental mammals Ashwell provides the first comprehensive review of the scientific

literature on the structure and function of the nervous system of Australian marsupials The book also includes the first comprehensive delineated atlases of brain structure in a representative diprotodont marsupial the tammar wallaby and a representative polyprotodont marsupial the stripe faced dunnart For those interested in brain development the book also provides the first comprehensive delineated atlas of brain development in a diprotodont marsupial the tammar wallaby during the critical first 4 weeks of pouch life
