

Squid Dissection

External Anatomy:

Before making any cuts in your squid, look at the outside of the squid.

1. First find the anterior side of the squid. This will be the side that does not have the siphon on it. Move the anterior side pointing up.

Once you are on the anterior side of the squid, identify the following structures and point them out to your group member(s):

- Fin
- Mantle
- Mantle Collar
- Eyes (2)
- Arms (8)
- Tentacles (2)
- Suckers

Look closely at the arms and the tentacles to observe the suckers. Draw a tentacle and the suckers in the box at the bottom of the page.

Notice the mantle collar of your squid. This color is very much different from a live squid. Part of the color change is the presence of preservatives. The other part of the color change is due to the death of the color cells, which are also known as chromatophores. When these cells are alive, they contract and expand to produce different colors and patterns. This makes the squid a master of camouflage.

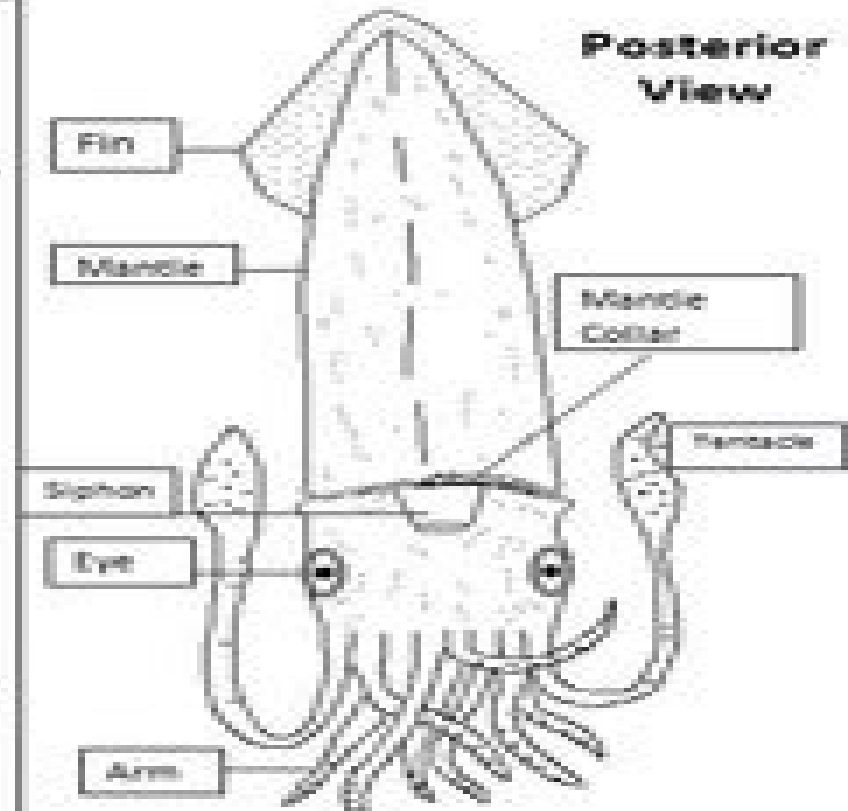

2. Flip the squid over so the posterior side of the squid is facing up. The posterior side will be the side that has the siphon on it. The siphon is used to bring water in and out of the mantle. It is also used to expel ink and reproductive products as well. The fin will also be darker in color when the squid has its dorsal side facing up.

Once you are on the dorsal side, identify the following structures:

- Siphon
- Mouth

You will be able to find the mouth by spreading apart and separating the arms. In the center of the arms, there will be an opening. This is the mouth.

Posterior View

Draw a tentacle and the suckers that you see on that tentacle.
