Levin,2007-06-01 In this volume David Geary provides a comprehensive theory that brings children s education into the 21st century and provides directions for the development of a new discipline evolutionary educational psychology Geary presents the case that a scientifically grounded approach to

children's schooling and to a lesser degree their later occupational interests can be informed by recent advances in the application of evolutionary theory to the understanding of the human brain mind and its development. He develops a taxonomy of evolved cognitive abilities and describes how from an evolutionary perspective these abilities are modified and refined during childhood. From there he lays the framework for understanding the relation between evolved abilities such as language and the non-evolved competencies that are built from them with schooling such as reading. Geary describes the mechanisms such as working memory that enable humans to transform evolved cognitive abilities into culturally important school-taught competencies. These are integrated with discussion of human intellectual history and cultural evolution and the sources of children's motivation to learn inside and outside of the classroom. In all this may well be the most revolutionary theory of children's schooling since Rousseau. Resources in Vocational Education, 1977. **The Act of Teaching** Donald R. The ninth edition has all of those strengths but has a greater focus on highly effective research-based practices that are described in a very step-by-step applied manner. This book is for those teachers who will be professionals in the area of special education or those who are working with students that have exceptionalities.
