Recherche Sur Les Substances Radioactives:

Recherches sur les substances radioactives Marie Curie, 2020-09-28 Le présent travail a pour but d'exposer les recherches que je poursuis depuis plus de 4 ans sur les substances radioactives. J'ai commencé ces recherches par une étude du rayonnement uranique qui a été découvert par M. Becquerel. Les résultats auxquels ce travail me conduisit parurent ouvrir une voie si intéressante qu'abandonnant ses travaux en train, M. Curie se joignit moi et nous réunîmes nos efforts en vue d'aboutir à l'extraction des substances radioactives nouvelles et de poursuivre leur étude. Dès le début de nos recherches nous avons cru devoir présenter des échantillons des substances découvertes et présenter par nous quelques physiciens en premier lieu M. Becquerel qui est le découvreur des rayons uraniques. Nous avons ainsi nous-même facilité les recherches faites par d'autres que nous sur les substances radioactives nouvelles. À la suite de nos premières publications M. Giesel en Allemagne se mit d'ailleurs aussi à préparer de ces substances et en prépara des échantillons. Plusieurs savants allemands. Ensuite ces substances furent mises en vente en France et en Allemagne et le sujet prenant de plus en plus d'importance donna lieu à un mouvement scientifique de sorte que de nombreux Mémoires ont paru et paraissent constamment sur les corps radioactifs principalement l'étranger. Les résultats des divers travaux français et étrangers sont nécessairement enchevêtrés comme pour tout sujet d'études nouveau et en voie de formation. L'aspect de la question se modifie pour ainsi dire de jour en jour.

Recherches sur les substances radioactives Marie Curie, 2021-05-18 Dans *Recherches sur les substances radioactives* Marie Curie explore avec rigueur scientifique les phénomènes de la radioactivité qu'elle a elle-même découverts à travers des travaux minutieux sur des éléments comme le polonium et le radium écrit dans un style clair et précis ce texte emblématique s'inscrit dans le mouvement scientifique du début du XX^e siècle marqué par des avancées spectaculaires dans la chimie et la physique. Les méthodes expérimentales décrites par Curie témoignent d'une époque où la science devenait accessible au grand public et s'ouvrait vers des applications pratiques notamment en médecine et en énergie. Marie Curie première femme à recevoir un prix Nobel et la seule à recevoir deux dans deux domaines différents physique et chimie est une figure emblématique de la science. Son parcours marqué par des obstacles liés à son genre et son origine polonaise lui a permis de passer les conventions de son époque. Son engagement envers la recherche et la connaissance ainsi que son esprit pionnier ont été des forces motrices dans ses travaux sur la radioactivité. Ce livre est une recommandation essentielle pour toute personne fascinée par les sciences fondamentales et les héros de la recherche. Ce texte constitue non seulement une pierre angulaire de la physique moderne mais aussi un hommage à la détermination d'une femme qui a bouleversé les codes académiques et contribué à une transformation profonde de la connaissance scientifique.

Radioactive Risk for Humans

Jean-Claude Amiard, Jean-Claude Zerbib, 2024-10-29 Once scientists discovered radioactivity they soon recognized its dangers However the assessment of radioactive risk to humans is still the subject of heated debate In this book the authors present a summary of past and recent scientific work on estimating radioactivity in the anthroposphere and the radioactive contamination of human beings They describe the various sources of exposure to ionizing radiation external internal and dietary and estimate the irradiation doses suffered by humans under various conditions both naturally occurring for the general public and professionals and from accidents The harmful effects of ionizing radiation at various biological levels molecular cellular and tissue and health effects at the individual level are also discussed Particular focus will be placed on radiation induced occupational illnesses The relationship between doses of ionizing radiation and its harmful effects is discussed with reference to high medium and low doses The controversies on this subject are outlined and international and French regulatory values are provided Finally an estimate of the radioactive risk for humans is suggested
