Improving the quality of products and manufacturing processes at low cost is an economic and technological challenge to industrial engineers and managers alike In today s business world the implementation of experimental design techniques often falls short of the mark due to a lack of statistical knowledge on the part of engineers and managers in their analyses of manufacturing process quality problems This timely book aims to fill this gap in the statistical knowledge required by engineers to solve manufacturing quality problems by using Taguchi experimental design methodology The book increases awareness of strategic methodology through real life case studies providing valuable information for both academics and professionals with no prior knowledge of the theory of probability and statistics Experimental Quality Provides a unique framework to help engineers and managers address quality problems and use strategic design methodology Offers detailed case studies illustrating the implementation of experimental design theory Is easily accessible without prior knowledge or understanding of probability and statistics This book provides an excellent resource for both academic and industrial environments and will prove invaluable to practising industrial engineers quality engineers and engineering managers from all disciplines **Hess's Paint Film Defects** H. R. Hamburg, 2012-12-06 Since publication of the first English edition this book has become the standard reference work on paint film defects throughout the world The very considerable advances in coatings technology since the second English edition was published in 1965 have necessitated a revision of the book a task which from the outset was recognized as formidable The very wide field to be covered required specialist knowledge as well as wide experience and we were fortunate in being able to enlist the services of a group of contributors who were well qualified for the task Due to his advancing age Mr Manfred Hess the originator of this work felt unable to take an active part in the preparation of the new edition He entrusted not only a large part of the necessarily extensive revision of the text but

also the editorial work the planning and compilation of the index to us jointly A variety of causes has prevented the main contributors to the second edition Mr W A Edwards and Mr T W Wilkinson from revising their sections Nevertheless much of what they and others have contributed to previous editions has enabled us to build on valuable foundations Much new material has been added the illustrations section has been expanded and enhanced by the addition of several colour plates Mr S T Harris revised the sections concerned with industrial finishes and in particular powder coatings and Dr T A Banfield contributed the sections on marine paints and compositions
