Spreadsheet Modeling and Decision Analysis Cliff T. Ragsdale, 2006 **Strategic allocation of resources using linear programming model with parametric analysis: in MATLAB and Excel Solver** Dinesh Gupta, 2014-05-01 Since the late 1940s linear programming models have been used for many different purposes Airline companies apply these models to optimize their use of planes and staff NASA has been using them for years to optimize their use of limited resources Oil companies use them to optimize their refinery operations Small and medium sized businesses use linear programming to solve a huge variety of problems often involving resource allocation In my study a typical product mix problem in a manufacturing system producing two products each product consists of two sub assemblies is solved for its optimal solution through the use of the latest versions of MATLAB having the command `simlp` which is very much like `linprog` As analysts we try to find a good enough solution for the decision maker to make a final decision Our attempt is to give the mathematical description of the product mix optimization problem and bring the problem into a form ready to call MATLAB's `simlp` command The objective of this study is to find the best product mix that maximizes profit The graph obtained using MATLAB commands give the shaded area enclosed by the constraints called the feasible region which is the set of points satisfying all the constraints To find the optimal solution we look at the lines of equal profit to find the corner of the feasible region which yield the highest profit This corner can be found out at the farthest line of equal profit which still touches the feasible region The most critical part is the sensitivity analysis using Excel Solver and Parametric Analysis using computer software which allows us to study the effect on optimal solution due to discrete and continuous change in parameters of the LP model including to identify bottlenecks We have examined other options like product outsourcing one time cost cross training of one operator manufacturing of hypothetical third product on under utilized machines and optimal sequencing of jobs on machines

Operations Research Models and Methods Paul A. Jensen, Jonathan F. Bard, 2002-10-08 In a rapidly developing field like Operations Research it's easy to get overwhelmed by the variety of topics and analytic techniques Paul Jensen and Jonathan Bard help you master the expensive field by focusing on the fundamental models and methodologies underlying the practice of Operations Research Bridging the gap between theory and practice the author presents the quantitative tools and models most important to understanding modern operations research You'll come to appreciate the power of OR techniques in solving real world problems and applications in your own field You'll learn how to translate complex situations into mathematical models solve models and turn models into solutions This text is designed to bridge the gap between theory and practice by presenting the quantitative tools and models most suited for modern operations research The principal goal is to give analysts engineers and decision makers a larger appreciation of their roles by defining a common terminology and by explaining the interfaces between the underlying methodologies Features Divides each subject into methods and models giving you greater flexibility in how you approach the material Concise and focused presentation highlights central ideas

The significance of the ecosystem service paradigm is that it helps us redefine and better communicate the relationships between people and nature. It is shown how these are essential to resolving challenges such as sustainable development and poverty reduction and the creation of a green economy in developing and developed world contexts. Bei derartigen Fragen, die in der Regel mehrere alternative Antworten zulassen, entscheiden häufig konkurrierende Interessengruppen mit unterschiedlichen Wertvorstellungen, die zwangsläufig zu Konflikten führen. Einen formalen Ansatz zur Lösung dieser Probleme, der auf der Auswertung von Material fußt, das ein Geographisches Informationssystem bietet, stellt dieses Buch vor. Mit vielen Beispielen und einem Überblick über erhaltene Software. 05/99
