Historic American Engineering Record Report - ID-33-D. ,1997 The Atomic Energy Commission AEC established the National Reactor Testing Station NRTS in 1949 as a place for the safe development of nuclear energy It selected the desert site in eastern Idaho on the Snake River Plain for its abundant supply of subsurface water and its relative isolation from densely populated settlements The land already was in public ownership because the United States Navy had used it as a proving ground in connection with its Pocatello Ordnance Depot during World War II The NRTS presently consists of about 890 square miles Its name was changed to Idaho National Engineering Laboratory in 1974 and then to Idaho National Engineering and Environmental Laboratory in 1997 The business of NRTS was to experiment with and then accumulate and disseminate knowledge about nuclear reactors One of the major goals of the United States Congress was to promote a commercial nuclear power industry Much of the testing and experimentation at the NRTS was related to reactor safety and

promoted this goal directly Military application although focused on weapon systems such as nuclear powered submarines and aircraft bombers were expected to generate knowledge and experience transferable to a commercial industry *The Plant Disease Reporter* ,1974 *Lighting, with which is Combined Lamps* ,1973 **Factory Management and Maintenance** ,1950 **Power Plant Engineering** ,1945 **Data Center Handbook** Hwaiyu Geng,2014-12-22 Provides the fundamentals technologies and best practices in designing constructing and managing mission critical energy efficient data centers Organizations in need of high speed connectivity and nonstop systems operations depend upon data centers for a range of deployment solutions A data center is a facility used to house computer systems and associated components such as telecommunications and storage systems It generally includes multiple power sources redundant data communications connections environmental controls e g air conditioning fire suppression and security devices With contributions from an international list of experts The Data Center Handbook instructs readers to Prepare strategic plan that includes location plan site selection roadmap and capacity planning Design and build green data centers with mission critical and energy efficient infrastructure Apply best practices to reduce energy consumption and carbon emissions Apply IT technologies such as cloud and virtualization Manage data centers in order to sustain operations with minimum costs Prepare and practice disaster recovery and business continuity plan The book imparts essential knowledge needed to implement data center design and construction apply IT technologies and continually improve data center operations Proceedings of the National Conference on Aeronautical Electronics ,1958 *Standard Plans* California.
