Congress. House. Committee on Appropriations. Subcommittee on Commerce, Justice, Science, and Related Agencies, 2013 *Historical journey in a linguistic archipelago* Emilie Aussant, Jean-Michel Fortis, This volume offers a selection of papers presented during the 14th International Conference on the History of the Language Sciences ICHoLS XIV Paris 2017 Part I brings together studies dealing with descriptive concepts First examined is the notion of accidens in Latin grammar and its Greek counterparts Other papers address questions with a strong echo in today's linguistics localism and its revival in recent semantics and syntax the origin of the term polysemy and its adoption through Bral and the difficulties attending the description of prefabs idioms and other fixed expressions This first part also includes studies dealing with representations of linguistic phenomena whether these concern the treatment of local varieties so called patois in French research or the import and epistemological function of spatial representations in descriptions of linguistic time Or again now taking the word representation literally the visual display of grammatical relations in the form of the first syntactic diagrams Part II presents case studies which involve wider concerns of a social nature the from below approach to the history of Chinese Pidgin English underlines the social roles of speakers and the diversity of speech situations while the scrutiny of Lhomond's Latin and French textbooks demonstrates the interplay of pedagogical practice cross linguistic comparison and descriptive innovation An overview of early descriptions of Central Australian languages reveals a whole spectrum of humanist to positivist and antihumanist stances during the colonial age An overarching framework is also at play in the anthropological perspective championed by Meillet whose socially and culturally oriented semantics is shown to live on in Benveniste The volume ends with a paper on Tr n c Th o whose work is an original synthesis between phenomenology and Marxist semiology wielded against the idealistic doctrine of Saussure Science Education in Canada Christine D. Tippet, Todd M. Milford, 2019-07-01 This book offers a meso level description of demographics science education and science teacher education Representing all 13 Canadian jurisdictions the book provides local insights that serve as the basis for exploring the Canadian system as a whole and function as a common starting point from which to identify causal relationships that may be associated with Canada's successes The book highlights commonalities consistencies and distinctions across the provinces and territories in a thematic analysis of the 13 jurisdiction specific chapters Although the analysis indicates a network of policy and practice issues warranting further consideration the diverse nature of Canadian science education makes simple identification of causal relationships elusive Canada has a reputation for strong science achievement However there is currently limited literature on science education in Canada at

the general level or in specific areas such as Canadian science curriculum or science teacher education This book fills that gap by presenting a thorough description of science education at the provincial territorial level as well as a more holistic description of pressing issues for Canadian science education **In the Shadow of the Machine** Jeremy

Naydler,2018-05-29 Contemporary life is so deeply reliant upon digital technology that the computer has come to dominate almost every aspect of our culture What is the philosophical and spiritual significance of this dependence on electronic technology both for our relationship to nature and for the future of humanity And what processes in human perception and awareness have produced the situation we find ourselves in As Jeremy Naydler elucidates in this penetrating study we cannot understand the emergence of the computer without seeing it within the wider context of the evolution of human consciousness which has taken place over millennia Modern consciousness he shows has evolved in conjunction with the development of machines and under their intensifying shadow The computer was the product of a long historical development culminating in the scientific revolution of the 17th century It was during this period that the first mechanical calculators were invented and the project to create more complex thinking machines began in earnest But the seeds were sown many hundreds of years earlier deep in antiquity Naydler paints a vast panorama depicting human development and the emergence of electronic technology His painstaking research illuminates an urgent question that concerns every living person today What does it mean to be human and what if anything distinguishes us from machines **The Oxford**

Multi-Secularism Paul Kurtz,2014-01-10 The contemporary world is witness to an intense controversy about secularism This controversy has intensified due to the presence of fundamentalism which challenges secular society and the secularization of philosophical ideas and ethical values Secularists maintain that the state should not impose a religious creed upon citizens and should respect freedom of conscience the right to believe or disbelieve in the prevailing orthodoxy This right is guaranteed by the First Amendment to the US Constitution and the Rights of Man enunciated in the French Revolution Yet many powerful religious institutions do not accept this principle Paul Kurtz argues that secularism needs to be allied to the emergence of democratic institutions that respect individual freedom and the pluralistic society He argues that a defense of secularism entails a defense of the civic virtues of democracy which include the toleration of dissent and

alternative lifestyles and the willingness to negotiate differences Consequently secularism will take different forms in different societies the term multi secularism best describes that Many people believe that it is impossible to maintain a moral order without the support of religion Kurtz vigorously denies that and this volume attempts to explicate the values and principles of secular morality which he sees as the cornerstone of the open democratic society Kurtz was involved in the campaign for secularism throughout his career as a philosopher This book reflects his participation in this battle and extends his thinking to new areas

V. Van Regenmortel,2015-12-08 In his 1962 book *The Structure of Scientific Revolutions* Thomas Kuhn famously argued that researchers in every field of scientific enquiry always operate under a set of presuppositions known as paradigms that are rarely explicitly stated In the field of HIV vaccine research several prevailing paradigms led scientists for many years to pursue unfruitful lines of investigations that impeded significant progress The uncritical acceptance of reigning paradigms makes scientists reluctant to abandon their mistaken assumptions even when they obtain results that are not consistent with the paradigms The following five paradigms which disregard the degeneracy of the immune system were particularly harmful

- 1 There is a primary and intrinsic epitope specific for each B cell receptor and for the corresponding monoclonal antibody In reality there is no single intrinsic or real epitope for any antibody but only a diverse group of potential ligands
- 2 Reactions with monoclonal antibodies are more specific than the combined reactivity of polyclonal antibodies In reality a polyclonal antiserum has greater specificity for a multiepitopic protein because different antibodies in the antiserum recognize separate epitopes on the same protein giving rise to an additive specificity effect By focusing vaccine design on single epitope Mab pairs the beneficial neutralizing synergy that occurs with polyclonal antibody responses is overlooked
- 3 The HIV epitope identified by solving the crystallographic structure of a broadly neutralizing Mab HIV Env complex should be able when used as immunogen to elicit antibodies endowed with the same neutralizing capacity as the Mab Since every anti HIV bnMab is polyspecific the single epitope identified in the complex is not necessarily the one that elicited the bnMab Since hypermutated Mabs used in crystallographic studies differ from their germline like receptor version present before somatic hypermutation the identified epitope will not be an effective vaccine immunogen
- 4 Effective vaccine immunogenicity can be predicted from the antigenic binding capacity of viral epitopes Most fragments of a viral antigen can induce antibodies that react with the immunogen but this is irrelevant for vaccination since these antibodies

rarely recognize the cognate intact antigen and even more rarely neutralize the infectivity of the viral pathogen that harbors the antigen 5 The rational design of vaccine immunogens using reverse vaccinology is superior to the trial and error screening of vaccine candidates able to induce protective immunity One epitope can be designed to increase its structural complementarity to one particular bnMab but such antigen design is only masquerading as immunogen design because it is assumed that antigenic reactivity necessarily entails the immunogenic capacity to elicit neutralizing antibodies When HIV Env epitopes engineered to react with a bnMab are used to select from human donors rare memory B cells secreting bnAbs this represents antigen design and not immunogen design The aim of this Research Topic is to replace previous misleading paradigms by novel ones that better fit our current understanding of immunological specificity and will help HIV vaccine development
