Smith, 2023-05-15 The Rocket Lab Maurice Zucrow Purdue University and America's Race to Space focuses on the golden era of space exploration between 1946 and 1966 specifically the life and times of Purdue University's Dr Maurice J Zucrow a pioneering teacher and researcher in aerospace engineering Zucrow taught America's first university course in jet and rocket propulsion wrote the field's first textbook and established the country's first educational Rocket Lab He was part of a small circle of innovators who transformed Purdue into the country's largest engineering university which became a cradle of astronauts Taking a chronological and thematic approach The Rocket Lab weaves between the local and national drawing in rival universities especially Harvard MIT Princeton and Caltech Also covered is Zucrow's role in the national project system of research and development through World War II and the Cold War At Aerojet he was one of the country's original project engineers dedicated to scientific technical expertise and the stepwise approach He made vanguard power plant contributions to the Northrop Flying Wing as well as the Corporal Nike and Atlas missiles among others Zucrow's work in propulsion helped to improve the country's arsenal of ballistic missiles and space launchers and as a teacher he educated the first generation of aerospace engineers This book elevates Zucrow and the central role he played in getting the United States to space

Cold, Hungry and in the Dark Bill Powers, 2013-06-14 An energy industry insider delivers hard truths about the reality of fracking Conventional wisdom has North America entering a new era of energy abundance thanks to shale gas But has industry been honest Cold Hungry and in the Dark argues that declining productivity combined with increasing demand will trigger a crisis that will cause prices to

skyrocket damage the economy and have a profound impact on the lives of nearly every North American Relying on faulty science bought and paid for white papers masquerading as independent research and industry consultants the shale promoters have vastly overstated the viable supply of shale gas resources for their own financial gain This startling expos written by an industry insider suggests that the stakes involved in the Enron scandal might seem like lunch money in comparison to the bursting of the natural gas bubble Exhaustively researched and rigorously documented Cold Hungry and in the Dark Puts supply and demand trends under a microscope Provides overwhelming evidence of the absurdity of the one hundred year supply myth Suggests numerous ways to mitigate the upcoming natural gas price spike The mainstream media has told us that natural gas will be cheap and plentiful for decades when nothing could be further from the truth Forewarned is forearmed Cold Hungry and in the Dark is vital reading for anyone concerned about the inevitable economic impact of our uncertain energy future Powers s step by step dismantling of the abundance myth ought to alarm policymakers corporate managers investors business owners and concerned citizens alike Kurt Cobb author of Prelude and contributor to The Christian Science Monitor **Tainted** Kristin Sharon Shrader-Frechette,2014 Three fourths of scientific research in the United States is funded by special interests Many of these groups have specific practical goals such as developing pharmaceuticals or establishing that a pollutant causes only minimal harm For groups with financial conflicts of interest their scientific findings often can be deeply flawed To uncover and assess these scientific flaws award winning biologist and philosopher of science Kristin Shrader Frechette uses the analytical tools of classic philosophy of science She identifies and evaluates the concepts data inferences methods models and conclusions of science tainted by the influence of special interests As a result she challenges accepted scientific findings regarding risks such as chemical toxins and carcinogens ionizing radiation pesticides hazardous waste disposal development of environmentally sensitive lands threats to endangered species and less protective standards for workplace pollution exposure In so doing she dissects the science on which many contemporary scientific controversies turn Demonstrating and advocating liberation science she shows how practical logical methodological and ethical evaluations of science can both improve its quality and credibility and protect people from harm caused by flawed science such as underestimates of cancers caused by bovine growth hormones cell phones fracking or high voltage wires This book is both an in depth look at the unreliable scientific findings at the root of contemporary debates in biochemistry ecology economics hydrogeology physics and zoology and a call to action for scientists philosophers of science and all citizens *Assessment of Advanced Solid-State Lighting* National Research Council,Division on Engineering and Physical Sciences,Board on Energy and Environmental Systems,Committee on Assessment of Solid-State Lighting,2013-04-27 The standard incandescent light bulb which still works mainly as Thomas Edison invented it converts more than 90% of the consumed electricity into heat Given the availability of newer lighting technologies that convert a greater percentage of electricity into useful light there is potential to decrease the amount of energy used for lighting in both commercial and

residential applications Although technologies such as compact fluorescent lamps CFLs have emerged in the past few decades and will help achieve the goal of increased energy efficiency solid state lighting SSL stands to play a large role in dramatically decreasing U S energy consumption for lighting This report summarizes the current status of SSL technologies and products light emitting diodes LEDs and organic LEDs OLEDs and evaluates barriers to their improved cost and performance Assessment of Advanced Solid State Lighting also discusses factors involved in achieving widespread deployment and consumer acceptance of SSL products These factors include the perceived quality of light emitted by SSL devices ease of use and the useful lifetime of these devices issues of initial high cost and possible benefits of reduced energy consumption

Collisions Alec Nevala-Lee, 2025-06-10 From the acclaimed biographer of Buckminster Fuller a riveting biography of the Nobel Prize winning physicist who became the greatest scientific detective of the twentieth century To his admirers Luis W Alvarez was the most accomplished inventive and versatile experimental physicist of his generation During World War II he achieved major breakthroughs in radar played a key role in the Manhattan Project and served as the lead scientific observer at the bombing of Hiroshima In the decades that followed he revolutionized particle physics with the hydrogen bubble chamber developed an innovative X ray method to search for hidden chambers in the Pyramid of Chephren and shot melons at a rifle range to test his controversial theory about the Kennedy assassination At the very end of his life he collaborated with his son to demonstrate that an asteroid impact was responsible for the extinction of the dinosaurs igniting a furious debate that raged for years after his death Alvarez was also a combative and relentlessly ambitious figure widely feared by his students and associates who testified as a government witness at the security hearing that destroyed the public career of his friend and colleague J Robert Oppenheimer In the first comprehensive biography of Alvarez Alec Nevala Lee vividly recounts one of the most compelling untold stories in modern science a narrative overflowing with ideas lessons and anecdotes that will fascinate anyone with an interest in how genius and creativity collide with the problems of an increasingly challenging world

Drawing Futures Bob Sheil,Frédéric Migayrou,Luke Pearson,Laura Allen,2016-11-11 *Drawing Futures* brings together international designers and artists for speculations in contemporary drawing for art and architecture Despite numerous developments in technological manufacture and computational design that provide new grounds for designers the act of drawing still plays a central role as a vehicle for speculation There is a rich and long history of drawing tied to innovations in technology as well as to revolutions in our philosophical understanding of the world In reflection of a society now underpinned by computational networks and interfaces allowing hitherto unprecedented views of the world the changing status of the drawing and its representation as a political act demands a platform for reflection and innovation *Drawing Futures* will present a compendium of projects writings and interviews that critically reassess the act of drawing and where its future may lie *Drawing Futures* focuses on the discussion of how the field of drawing may expand synchronously alongside technological and computational developments The book coincides with an international conference of the same name taking place at The Bartlett School of Architecture UCL in November 2016 Bringing together practitioners from many creative fields the book discusses how drawing is changing in relation to new technologies for the production and dissemination of ideas

Selected Works of Joseph E. Stiglitz Joseph E. Stiglitz,2019 This is the third volume in a new definitive six volume edition of the works of Joseph Stiglitz one of today s most distinguished and controversial economists Stiglitz was awarded the Nobel Prize in Economics in 2001 for his work on asymmetric information and is widely acknowledged as one of the pioneers in the field of modern information economics and more generally for his contributions to microeconomics Volume III contains a selection of Joseph E Stiglitz s work on microeconomics It questions well established tenets including many that are so fundamental they are almost taken for granted covering basic concepts of risk and markets the management of risk the theory of the firm the economics of organization and theory of human behaviour Stiglitz reflects on his work and the field more generally throughout the volume by including substantial original introductions to the *Selected Works* the volume as a whole and each part within the volume

Spacecraft Dynamics and Control Enrico Canuto,Carlo Novara,Donato Carlucci,Carlos Perez-Montenegro,Luca Massotti,2018-03-08 *Spacecraft Dynamics and Control* The Embedded Model Control Approach provides a uniform and systematic way of approaching space engineering control problems from the standpoint of model

based control using state space equations as the key paradigm for simulation design and implementation The book introduces the Embedded Model Control methodology for the design and implementation of attitude and orbit control systems The logic architecture is organized around the embedded model of the spacecraft and its surrounding environment The model is compelled to include disturbance dynamics as a repository of the uncertainty that the control law must reject to meet attitude and orbit requirements within the uncertainty class The source of the real time uncertainty estimation prediction is the model error signal as it encodes the residual discrepancies between spacecraft measurements and model output The embedded model and the uncertainty estimation feedback noise estimator in the book constitute the state predictor feeding the control law Asymptotic pole placement exploiting the asymptotes of closed loop transfer functions is the way to design and tune feedback loops around the embedded model state predictor control law reference generator The design versus the uncertainty class is driven by analytic stability and performance inequalities The method is applied to several attitude and orbit control problems The book begins with an extensive introduction to attitude geometry and algebra and ends with the core themes state space dynamics and Embedded Model Control Fundamentals of orbit attitude and environment dynamics are treated giving emphasis to state space formulation disturbance dynamics state feedback and prediction closed loop stability Sensors and actuators are treated giving emphasis to their dynamics and modelling of measurement errors Numerical tables are included and their data employed for numerical simulations Orbit and attitude control problems of the European GOCE mission are the inspiration of numerical exercises and simulations The suite of the attitude control modes of a GOCE like mission is designed and simulated around the so called mission state predictor Solved and unsolved exercises are included within the text and not separated at the end of chapters for better understanding training and application Simulated results and their graphical plots are developed through MATLAB Simulink code

International Water Law and the Human Right to Water Imad Antoine Ibrahim, 2024-11-19 This book examines the development of international law applicable to Transboundary Aquifers TBAs considering the Human Right to Water and Sanitation HRWS The purpose is to determine how International Water Law IWL and the HRWS can be harmonized in the context of TBAs This is important given rules and instruments adopted to address this topic are relatively nascent and the field itself is still in the process of developing regulatory frameworks Taking the application of the HRWS to shared aquifers as a case study the work discusses whether IWL and International Human Rights Law complement each other The response to this question requires an analysis of the development of International Groundwater Law and its challenges the evolution of the HRWS the nature of transboundary groundwaters and the interplay between these two fields The author argues that IWL agreements should contain a provision related to the HRWS to ensure the protection of this right with a stipulation included in the nonbinding instrument that tackles shared groundwaters the Draft Articles on the Law of Transboundary Aquifers adopted in 2008 through the United Nations General Assembly Resolution The book will be of interest to international
