Formality of the Little \mathbb{A}^n -disks Operad Pascal Lambrechts, Ismar Volić,2014-06-05 The little disks operad along with its variants is an important tool in homotopy theory It is defined in terms of configurations of disjoint dimensional disks inside the standard unit disk in \mathbb{C}^n and it was initially conceived for detecting and understanding fold loop spaces Its many uses now stretch across a variety of disciplines including topology algebra and mathematical physics In this paper the authors develop the details of Kontsevich s proof of the formality of little disks operad over the field of real numbers More precisely one can consider the singular chains on as well as the singular homology of These two objects are operads in the category of chain complexes The formality then states that there is a zig zag of quasi isomorphisms connecting these two operads The formality also in some sense holds in the category of commutative differential graded algebras The authors additionally prove a relative version of the formality for the inclusion of the little disks operad in the little disks operad when

Generalized Descriptive Set Theory and Classification Theory Sy-David Friedman,Tapani Hyttinen, Vadim Kulikov,2014-06-05 Descriptive set theory is mainly concerned with studying subsets of the space of all countable binary sequences In this paper the authors study the generalization where countable is replaced by uncountable They explore properties of generalized Baire and Cantor spaces equivalence relations and their Borel reducibility The study shows that the descriptive set theory looks very different in this generalized setting compared to the classical countable case They also draw the connection between the stability theoretic complexity of first order theories and the descriptive set theoretic complexity of their isomorphism relations The authors results suggest that Borel reducibility on uncountable structures is a model theoretically natural way to compare the complexity of isomorphism relations

Tunnel Visions Michael Riordan,Lilian Hoddeson,Arienne W. Kolb,2015-11-20 A detailed and engaging account

of the development of the superconducting supercollider one of the largest scientific undertakings in the United States

Journal of American History Starting in the 1950s US physicists dominated the search for elementary particles aided by the association of this research with national security they held this position for decades In an effort to maintain their hegemony and track down the elusive Higgs boson they convinced President Reagan and Congress to support construction of the multibillion dollar Superconducting Super Collider project in Texas the largest basic science project ever attempted But after the Cold War ended and the estimated SSC cost surpassed ten billion dollars Congress terminated the project in October 1993 Drawing on extensive archival research contemporaneous press accounts and over one hundred interviews with scientists engineers government officials and others involved Tunnel Visions tells the riveting story of the aborted SSC project The authors examine the complex interrelated causes for its demise including problems of large project management continuing cost overruns and lack of foreign contributions In doing so they ask whether Big Science has become too large and expensive including whether academic scientists and their government overseers can effectively manage such an enormous undertaking Focusing on the scientific technical and political conflicts that led to delays ever rising costs and eventually the SSC's cancellation by Congress Tunnel Visions is a true techno thriller Burton Richter winner of the Nobel Prize in Physics Most good science stories are tales of discovery and success but failure can be just as riveting Here two historians and an archivist describe the greatest particle physics experiment that never was Scientific American Native Games Chris Hallinan, Barry Judd, 2013-07-19 Research on Indigenous participation in sport offers many opportunities to better understand the political issues of equality empowerment self determination and protection of culture and identity This volume compares and conceptualises the sociological significance of Indigenous sports in different international contexts

The Seventh Continent Deborah Shapley, 2013-11-26 First Published in 2011 Part of the resources for the future library collection on Global Environment and Development this is the final Volume of seven This book presents a broad ranging study of Antarctica s history politics and development prospects with a command of issues in geography science policy technology and international law which is addressed with authority and flair At this time nations of the world are struggling to fashion a legal framework to govern Antarctic resources which some regard as the common heritage of mankind This debate described vividly here represents an ongoing application of the common property resource concept which has played a prominent role in RFF s research and analytical contributions during the past quarter century Furthermore the continent s energy and minerals endowment if exploitable at all and in the author s judgment the prospects for this are dim constitute at best resources for the future

Spacecraft Dynamics and Control Enrico Canuto, Carlo Novara, Donato Carlucci, Carlos Perez-Montenegro, Luca Massotti, 2018-03-08 Spacecraft Dynamics and Control The Embedded Model Control Approach provides a uniform and systematic way of approaching space engineering control problems from the standpoint of model based control using state space equations as the key paradigm for simulation design and implementation The book introduces the Embedded Model Control methodology for the design and implementation of attitude and orbit control systems The logic architecture is organized around the embedded model of the spacecraft and its surrounding environment The model is compelled to include disturbance dynamics as a repository of the uncertainty that the control law must reject to meet attitude and orbit requirements within the uncertainty class The source of the real time uncertainty estimation prediction is the model error signal as it encodes the residual discrepancies between spacecraft measurements and model output The embedded model and the uncertainty estimation feedback noise estimator in the book constitute the state predictor feeding the control law Asymptotic pole placement exploiting the asymptotes of closed loop transfer functions is the way to design and tune feedback loops around the embedded model state predictor control law reference generator The design versus the uncertainty class is driven by analytic stability and performance inequalities The method is applied to several attitude and orbit control problems The book begins with an extensive introduction to attitude

geometry and algebra and ends with the core themes state space dynamics and Embedded Model Control Fundamentals of orbit attitude and environment dynamics are treated giving emphasis to state space formulation disturbance dynamics state feedback and prediction closed loop stability Sensors and actuators are treated giving emphasis to their dynamics and modelling of measurement errors Numerical tables are included and their data employed for numerical simulations Orbit and attitude control problems of the European GOCE mission are the inspiration of numerical exercises and simulations The suite of the attitude control modes of a GOCE like mission is designed and simulated around the so called mission state predictor Solved and unsolved exercises are included within the text and not separated at the end of chapters for better understanding training and application Simulated results and their graphical plots are developed through MATLAB Simulink code

Advances in Automation III Andrey A. Radionov,Vadim R. Gasiyarov,2022-01-18 This book reports on innovative research and developments in automation Spanning a wide range of disciplines including communication engineering power engineering control engineering instrumentation signal processing and cybersecurity it focuses on methods and findings aimed at improving the control and monitoring of industrial and manufacturing processes as well as safety Based on the International Russian Automation Conference held on September 5 11 2021 in Sochi Russia the book provides academics and professionals with a timely overview of and extensive information on the state of the art in the field of automation and control systems and fosters new ideas and collaborations between groups in different countries Radiological Monitoring of the Environment B. C. Godbold,J. K. Jones,2013-09-03 Radiological Monitoring of the Environment documents the proceedings of a symposium organized by The Central Electricity Generating Board in association with The Joint Health Physics Committee held at Berkeley Gloucestershire on 3 4 October 1963 Environmental monitoring in its different aspects is of interest to most health physicists and in particular to those of the Generating Board in relation to nuclear power stations and nuclear laboratories The symposium served the dual purpose of disseminating information on a subject of importance and fulfilling one of the objectives of the Joint Health Physics Committee by bringing together people working in various fields This volume is divided into two parts following the way in which the symposium was arranged The first part of the volume contains the papers and the second part consists of the transactions of the meeting at Berkeley The papers presented cover topics such as radioactivity in agricultural products the monitoring of artificial radioactivity in waters round the British Isles the monitoring of uranium and plutonium dust hazards radiological control in university laboratories and environmental surveys around research reactors The Long Game on the Silk Road S. Frederick Starr,Svante E. Cornell,2018-04-03 This book argues that American and European policies toward Central Asia and the Caucasus suffer from both conceptual and structural impediments It traces the framework of Western policies to the 1975 Helsinki Final Act which resulted in the stovepiping of relations into political economic and democracy categories and in often uncoordinated or contradictory policies While the authors embrace the goal of promoting human rights and democracy they argue that the antagonistic methods adopted to

advance this goal have proven counter productive They propose that Western governments work with the regional states rather than on or against them and that instead of focusing directly on political systems policies should focus on developing the quality of governance and help build institutions that will be building blocks of rule of law and democracy in the long term The authors also argue that Western leaders have largely failed to grasp the significance of this region relegated it to a subordinate status and thus damaging western interests The development of sovereign economically strong and effectively self governing states in the Caucasus and Central Asia is an important goal in its own right the book stresses the importance of a region where the development and preservation of secular statehood could become a model for the entire Muslim world

Languages Cliff B. Jones, 2020-11-17 This book is about describing the meaning of programming languages. The author teaches the skill of writing semantic descriptions as an efficient way to understand the features of a language. While a compiler or an interpreter offers a form of formal description of a language, it is not something that can be used as a basis for reasoning about that language, nor can it serve as a definition of a programming language itself, since this must allow a range of implementations. By writing a formal semantics of a language, a designer can yield a far shorter description and tease out, analyse, and record design choices. Early in the book, the author introduces a simple notation, a meta language used to record descriptions of the semantics of languages. In a practical approach, he considers dozens of issues that arise in current programming languages and the key techniques that must be mastered in order to write the required formal semantic descriptions. The book concludes with a discussion of the eight key challenges: delimiting a language, concrete representation, delimiting the abstract content of a language, recording semantics, deterministic languages, operational semantics, non-determinism, context dependency, modelling sharing, modelling concurrency, and modelling exits. The content is class-tested and suitable for final year undergraduate and postgraduate courses. It is also suitable for any designer who wants to understand languages at a deep level. Most chapters offer projects, some of these quite advanced exercises that ask for complete descriptions of languages, and the book is supported throughout with pointers to further reading and resources. As a prerequisite, the reader should know at least one imperative high-level language and have some knowledge of discrete mathematics, notation for logic, and set theory.
