Physical Sciences Paper September Preparatory:

The Preparation and Structure of Thin Films of Boron on Silicon E. T. Peters, W. D. Potter, 1965 *Chemical News and Journal of Physical Science*, 1870 **Physics of the Mössbauer Effect** Leonard Eyges, 1964 This paper considers from a simple physical point of view the Mossbauer effect i.e. the recoilless emission of gamma rays from a nucleus bound in a crystal lattice. It begins with a discussion of the kinematics of gamma ray emission from such a nucleus. The idealized case of a massive lattice characterized by a single frequency and the more realistic one and three dimensional models are treated. We point up the fact that in the Mossbauer effect the lattice as a whole the lattice center of mass always recoils after photon emission so that the term recoilless emission is in one sense misleading. We emphasize that the essence of the Mossbauer effect is not photon emission without recoil but rather is photon emission without transfer of energy to internal degrees of freedom of the lattice. Using the basic ideas of quantum mechanics namely the rules for the manipulation of probability amplitudes the so-called transformation theory we calculate the probability for recoil without excitation of internal degrees of freedom i.e. the Mossbauer f factor on the assumption that the individual photon emissions consequent lattice recoil are instantaneous. In Appendix A we discuss this question of instantaneous emission in some detail and show how it is not in contradiction with the fact that the nuclear transition that leads to the gamma ray emission has a finite half width. In Appendix B those rules of transformation theory that are used in the body of the paper are summarized. Author

This book is the first in depth study of the ways in which various types of spectra especially the sun's Fraunhofer lines have been recorded displayed and interpreted. The book assesses the virtues and pitfalls of various types of depictions including hand sketches woodcuts engravings lithographs and from the late 1870s onwards photomechanical reproductions. The material of a 19th century engraver or lithographer the daily research practice of a spectroscopist in the laboratory or a student's use of spectrum posters in the classroom all are looked at and documented here. For pioneers of photography such as John Herschel or Hermann Wilhelm Vogel the spectrum even served as a prime test object for gauging the color sensitivity of their processes. This is a broad contextual portrayal of the visual culture of spectroscopy in the 19th and early 20th centuries. The illustrations are not confined to spectra they show instruments laboratories people at work and plates of printing manuals. The result is a multifaceted description focusing on the period
