Proceedings of IAC-EIaT 2014 collective of authors, 2014-12-02 Conference proceedings International Academic Conference on Engineering Internet and Technology in Prague 2014 IAC EIaT 2014 in Prague Friday Saturday December 12 13 2014 Decision Making and Modelling in Cognitive Science Sisir Roy, 2016-10-26 This book discusses the paradigm of quantum ontology as an appropriate model for measuring cognitive processes It clearly shows the inadequacy of the application of classical probability theory in modelling the human cognitive domain The chapters investigate the context dependence and neuronal basis of cognition in a coherent manner According to this framework epistemological issues related to decision making and state of mind are seen to be similar to issues related to equanimity and neutral mind as discussed in Buddhist perspective The author states that quantum ontology as a modelling tool will help scientists create new methodologies of modelling in other streams of science as well **Gas and Steam Turbine Power Plants** S. Can Gülen, 2023-10-19 Explore sustainable electric power generation technology from first principles to cutting edge systems in this in depth resource Including energy storage carbon capture hydrogen and hybrid systems the detailed coverage includes performance estimation operability concerns economic trade off and other intricate analyses supported by implementable formulae real world data and tried and tested quantitative and qualitative estimating techniques Starting from basic concepts and key equipment this book builds to precise analysis of balance of plant operation through data and methods gained from decades of hands on design testing operation and trouble shooting Gain the knowledge you need to operate in conditions beyond standard settings and environment with thorough descriptions of off design operations Novel technologies become accessible with stripped back descriptions and physics based calculations This book is an ideal companion for engineers in the gas turbine and electric power field *Active Learning in College Science* Joel J. Mintzes, Emily M. Walter, 2020-02-23 This book explores evidence based practice in college science teaching It is grounded in disciplinary education research by practicing scientists who have chosen to take Wieman s 2014 challenge seriously and to investigate claims about the efficacy of alternative strategies in college science teaching In editing this book we have chosen to showcase outstanding cases of exemplary practice supported by solid evidence and to include practitioners who offer models of teaching and learning that meet the high standards of the scientific disciplines Our intention is to let these distinguished scientists speak for themselves and to offer authentic guidance to those who seek models of excellence Our primary audience consists of the thousands of dedicated faculty and graduate students who teach undergraduate science at community and technical colleges 4 year liberal arts institutions comprehensive regional campuses and flagship research universities In keeping with Wieman s challenge our primary focus has been on identifying classroom practices that encourage and support meaningful learning and conceptual understanding in the natural sciences The content is structured as follows after an Introduction based on Constructivist Learning Theory Section I the practices we explore are Eliciting Ideas and Encouraging Reflection Section II

Using Clickers to Engage Students Section III Supporting Peer Interaction through Small Group Activities Section IV Restructuring Curriculum and Instruction Section V Rethinking the Physical Environment Section VI Enhancing Understanding with Technology Section VII and Assessing Understanding Section VIII The book's final section IX is devoted to Professional Issues facing college and university faculty who choose to adopt active learning in their courses The common feature underlying all of the strategies described in this book is their emphasis on actively engaging students who seek to make sense of natural objects and events Many of the strategies we highlight emerge from a constructivist view of learning that has gained widespread acceptance in recent years In this view learners make sense of the world by forging connections between new ideas and those that are part of their existing knowledge base For most students that knowledge base is riddled with a host of naive notions misconceptions and alternative conceptions they have acquired throughout their lives To a considerable extent the job of the teacher is to coax out these ideas to help students understand how their ideas differ from the scientifically accepted view to assist as students restructure and reconcile their newly acquired knowledge and to provide opportunities for students to evaluate what they have learned and apply it in novel circumstances Clearly this prescription demands far more than most college and university scientists have been prepared for

Eco-Towers K. Al-Kodmany, 2015-05-05 *Eco Towers* introduces readers to groundbreaking designs most progressive projects and innovative ways of thinking about a new generation of green skyscrapers that could provide solutions to crises the world faces today including climate change depleting resources deteriorating ecology population increase decreasing food supply urban heat island effect pollution deforestation and more

The book suggests that the eco tower culminates the cultural and technological evolutions of the 21st century by building and improving on the experiences of earlier designs of skyscrapers and philosophies particularly green sustainable and ecological. It argues that the true green skyscraper is the one that engages successfully with its larger urban context by establishing symbiotic relationships with the social economic and environmental aspects. Since tall buildings are becoming larger and taller serving greater number of people and exerting higher demand on the environment and existing infrastructure any improvements in their design and construction will significantly enhance urban conditions. The book elucidates how green skyscrapers better serve tenants mitigate environmental impacts and improve integration with the city infrastructure. It explains how skyscrapers long life cycle offers the greatest justifications for recycling precious resources and makes it a worthwhile to employ green features in constructing new skyscrapers and retrofitting existing ones. Subsequently the book explores new designs that are employing cutting edge green technologies at a grand scale including water saving technologies solar panels helical wind turbines sunlight sensing LED lights rainwater catchment systems graywater and blackwater recycling systems seawater powered air conditioning and the like. In the future new building materials and smart technologies will continue to offer innovative design approaches to sustainable tall buildings with new aesthetics referred to as eco iconic skyscrapers.

The Troubled Rhetoric and Communication of Climate Change Philip Eubanks, 2015-05-15 Despite an overwhelming scientific consensus climate change remains one of the most controversial issues of our time. Focusing on the rhetoric that surrounds the issue of climate change this groundbreaking book analyses why the debate continues to rage and examines how we should argue when winning the argument really matters. Going beyond routine condemnations of the wildest statements made by religious fundamentalists or spokespeople for fossil fuel interests the book explains the mutually exacerbating problems that permit many of us greet catastrophic predictions with an equivocal shrug. It argues that the argumentative situation around climate change makes a certain kind of skepticism fair minded skepticism not only possible but likely. The book also strikes a hopeful note reminding us that people do change their minds in response to effective argumentation that appeals to deeply shared values. Offering new insight into an ongoing academic discussion about the nature of argument and how it can be undertaken more effectively and ethically as well as a new perspective on the rhetoric of science and technology this book will be a valuable resource to students and scholars of climate change environmental humanities rhetoric environmental communication sociology and science and technology studies.

Consciousness and Being Robert C. Trundle,2019-02-14 This book is of vital interest to anyone who yearns to know how science theology ethics art and politics do really afford objective truths Not only that but how these truths in seemingly clashing areas are interrelated by common sense and rooted in our incontrovertible consciousness of Being itself Being itself as the basis for truth is defended against truth denying modern philosophers who having headed in the wrong direction with tragic costs of murderous ideologies have completely misunderstood the simple origin of truth in the realist tradition of Aristotle Aquinas Etienne Gilson and others Their profoundness is not bamboozled by the covert and corrupting sophism of today s teachings Anyone interested in surmounting these teachings that include political correctness and a false divide of fact from value which paralyze the very modern ethics that helped to create them should read this book The book reveals how ethics art and politics can be as true as the sciences that inform them
