and Architectural Graphic Standards join forces to offer architects vital single source access to the unbiased information they need to evaluate select and specify the best finish materials for any job. This powerful visual resource combines hundreds of illustrations from Architectural Graphic Standards with corresponding building material performance and specification information from AIA MASTERSPEC published by ARCOM. Use this book during the schematic and design development phases of a project and as an indispensable aid for product selection and specification. Essential for architects, interior designers, and building designers, this vital reference provides information to make informed decisions about specific design goals such as affordability, environmental friendliness, durability, fire resistance, and esthetic success. Features include: Unique source of independent in-depth building product performance information; the one source that gives you reliable building product information before you consult with manufacturers; Covers a full range of standard finish materials and includes selection criteria, details, typical product sizes, and installation and maintenance data; Provides current standards based on research by government association and independent testing organizations as well as the input of experienced architects and specifiers. Architectural Graphic Standards has served the design community for decades as a virtual bible for architectural detailing. MASTERSPEC Evaluations have long comprised one of the best resources available for building product selection and specification. Consolidating the strong points of both into this new desktop reference is an act of sheer brilliance. Martin M. Bloomenthal, FAIA, CCS, CSI, Principal, The Hillier Group, Princeton, New Jersey.

Mechanism Design and Analysis Using PTC Creo Mechanism 9.0 Kuang-Hua Chang, 2022-08. Learn to make your design process more cost effective, reliable, and efficient. Teaches you how to prevent redesign due to design defects. A project-based approach teaches new users how to perform analysis using Creo Mechanism. Covers model creation, analysis type selection, kinematics and dynamics, and results visualization. Incorporates theoretical discussions of kinematic and dynamic analysis with simulation results. Covers the most frequently used commands and concepts of mechanism design and analysis. Mechanism Design and Analysis Using PTC Creo Mechanism 9.0 is designed to help you become familiar with Mechanism, a module of the PTC Creo Parametric software family which supports modeling and analysis or simulation of mechanisms in a virtual computer environment. Capabilities in Mechanism allow users to simulate and visualize mechanism performance. Using Mechanism early in the product development stage could prevent costly redesign due to design defects found in the physical testing phase; therefore, it contributes to a more cost-effective, reliable, and efficient product development process. The book is written following a project-based learning approach and covers the major concepts and frequently used commands required to advance readers from a novice to an intermediate level. Basic concepts discussed include model creation such as body and joint definitions, analysis type selection such as static assembly analysis, kinematics and dynamics, and results visualization. The concepts are introduced using simple yet realistic examples. Verifying the results obtained from computer simulation is extremely important. One of the unique features of this textbook is the incorporation of theoretical discussions for kinematic and

dynamic analyses in conjunction with simulation results obtained using Mechanism The theoretical discussions simply support the verification of simulation results rather than providing an in depth discussion on the subjects of kinematics and dynamics
