

## Chapter 1 Science Skills

**Using Scientific Notation**

Light travels through space at a speed of  $3.00 \times 10^8$  meters per second. How long does it take for light to travel from the sun to Earth, which is a distance of  $1.50 \times 10^{11}$  meters?

**1. Read and Understand**

*What information are you given?*

$$\text{Speed} = 3.00 \times 10^8 \text{ m/s}$$

$$\text{Total distance} = 1.50 \times 10^{11} \text{ m}$$

**2. Plan and Solve**

*What unknown are you trying to calculate?*

$$\text{Time} = ?$$

*What formula contains the given quantities and the unknown?*

$$\text{Time} = \frac{\text{Total distance}}{\text{Average speed}}$$

*Replace each variable with its known variable and known value.*

$$\begin{aligned} \text{Time} &= \frac{1.50 \times 10^{11} \text{ m}}{3.00 \times 10^8 \text{ m/s}} \\ &= \frac{1.50}{3.00} \times (10^{11-8})(\text{m}/(\text{m}/\text{s})) \\ &= 0.50 \times 10^3 \text{ s} = 5.00 \times 10^2 \text{ s} \end{aligned}$$

**3. Look back and check**

*Is your answer reasonable?*

Yes, the number calculated is the quotient of distance and speed, and the units (s) indicate time.

**Math Practice**

*On a separate sheet of paper, solve the following problems.*

1. The flow of water in a stream is 210,000 liters per hour. Use scientific notation to calculate the amount of water that flows in a week (168 hours).
2. The density of a liquid is  $8.03 \times 10^{-1}$  kilogram per liter. What is the mass (in kg) of liquid in a full 100,000 liter tank?
3. How many balloons, each containing  $6.02 \times 10^{23}$  particles of helium gas, can be filled from a tank that contains  $1.204 \times 10^{25}$  helium particles?

**Math Skill:**  
**Scientific Notation**

You may want to read more about this **Math Skill** in the **Skills and Reference Handbook** at the end of your textbook.

Student's Guide to Physical Science Jonathan Turk, Amos Turk, 1977 *Central School Journal*, 1886 **History and Precedent in Environmental Design** Anatol Rapoport, 2013-06-29 This book is about a new and different way of approaching and studying the history of the built environment and the use of historical precedents in design However although what I am proposing is new for what is currently called architectural history both my approach and even my conclusions are not that new in other fields as I discovered when I attempted to find supporting evidence In fact of all the disciplines dealing with various aspects of the study of the past architectural history seems to have changed least in the ways I am advocating There is currently a revival of interest in the history of architecture and urban form a similar interest applies to theory vernacular design and culture environment relations After years of neglect the study of history and the use of historical precedent are again becoming important However that interest has not led to new approaches to the subject nor have its bases been examined This I try to do In so doing I discuss a more rigorous and I would argue a more valid way of looking at historical data and hence of using such data in a theory of the built environment and as precedent in environmental design Underlying this is my view of Environment Behavior Studies CEBS as an emerging theory rather than

as data to help design based on current theory Although this will be the subject of another book a summary statement of this position may be useful *Earth's Waters: Teacher's ed* ,2005

**Principles of Environmental Economics and Sustainability** Ahmed Hussen,2012-11-12 Recent years have witnessed considerable consolidation between the disciplines of environmental and ecological economics at research level but until now textbooks in the area have done little to reflect this Ahmed Hussen s book is to date the only one to reconcile the two standpoints The central focus of the book will continue to be on this systematic integration of both mainstream and ecological approaches to environmental economics and an acknowledgement that enduring solutions to major contemporary environmental challenges can be obtained through studies based on a well conceived and balanced interdisciplinary approach However this third edition also contains much that is new Chiefly brand new chapters appear covering the following topics The economics of climate change The economics of biodiversity and ecosystem services Green accounting and alternative economic and social indicators of sustainability The business case for environmental sustainability An Appendix that provides a brief historical account of the development of ecological economics The result is a comprehensive introduction to the main facets of environmental and ecological economics a text that boldly refuses to put up barriers between disciplines and takes a holistic approach to vital issues This student friendly textbook contains a variety of study tools including learning points boxed features case studies revision questions and discussion questions and an Appendix that provides students with a review of basic economic principles relevant to the study of the environment and its management Written in a clear and accessible style this book will prove an excellent choice for introducing both students and academics to the world of environmental economics
