particularly on the return to thinking about higher education's role in development. The final part considers the changing but still important role that international cooperation plays in shaping education in developing countries. Featuring over thirty chapters written by leading international and interdisciplinary scholars, the Routledge Handbook of International Education and Development offers the first comprehensive and forward-looking resource for students and scholars.

Handbook of Research on Climate Change Impact on Health and Environmental Sustainability Dinda, Soumyananda, 2015-11-05 Climate change is not only one of the greatest threats to modern civilization; it is also a great challenge to economic development in the 21st century. Global warming can lead to periods of both drought and intense rain, causing crops to fail and ruining the livelihoods of many in underdeveloped countries. The Handbook of Research on Climate Change Impact on Health and Environmental Sustainability is an authoritative reference source that offers a comprehensive and timely analysis of various aspects of global warming and its consequences. Featuring such topics as assessment of and adaption to climate change, water and its socio-economic impact, the environmental effects of climate change on human health and the mitigation of climate change on both a local and global level, this expansive handbook is an essential reference source for students, researchers, academicians, engineers, government executives and other practitioners looking to make a difference in the treatment of our environment. This publication features timely research on subjects including but not limited to climate change and its effect on both urbanization and the trade competitiveness of different regions, water-related diseases flourishing due to climate change, health risks and rethinking health service provision, losses from natural disasters, farmers' views on the environment, drought management policies, groundwater resource management, trends in long-term rainfall, fishery management and productivity, preserving biodiversity and sustainable forest use.

Future Spacecraft Propulsion Systems and Integration Paul A. Czysz, Claudio Bruno, Bernd Chudoba, 2017-08-30 The updated and expanded third edition of this book focuses on the multi-disciplinary coupling between flight vehicle hardware alternatives and enabling propulsion systems. It discusses how to match near-term and far-term aerospace vehicles to missions and provides a comprehensive overview of the subject, directly contributing to the next generation space infrastructure from space tourism to space exploration. This holistic treatment defines a mission portfolio addressing near-term to long-term space transportation needs, covering sub-orbital, orbital and escape flight profiles. In this context, a vehicle configuration classification is introduced, covering alternatives starting from the dawn of space access. A best practice parametric sizing approach is introduced to correctly design the flight vehicle for the mission. This technique balances required mission with the available vehicle solution space and is an essential capability sought after by

technology forecasters and strategic planners alike *Coal and Coalbed Gas* Romeo M. Flores, Tim A. Moore, 2024-01-24

Coal and Coalbed Gas Future Directions and Opportunities Second Edition introduces the latest in coal geology research and the engineering of gas extraction. Importantly, the second edition examines how over the last 10 years research has both changed focus and where it is conducted. This shift essentially depicts a tale of two worlds: one half Western Europe/North America moving away from coal and coalbed gas research and production towards cleaner energy resources, and the other half Asia Pacific region/Eastern Europe/South America increasing both research and usage of coal. These changes are marked by a precipitous fall in coalbed gas production in North America; however, at the same time, there has been a significant rise in coal and coalbed gas production in Australia, China, and India. The driver for higher production and its associated research is a quest for affordable energy and economic security that a large resource base brings to any country like Australia's first large-scale coalbed gas to liquid natural gas projects supplying the demand for cleaner burning LNG to the Asian Pacific region. Since the last edition of this book, global climate change policies have more forcibly emphasized the impact of methane from coal mines and placed these emissions equal to or even more harmful than CO₂ emissions from fossil fuels in general. Governmental policies have prioritized capture, use, and storage of CO₂ burning coal in new highly efficient, low-emission power plants and gas pre-drainage of coal mines. The Organization for Economic Cooperation and Development (OECD) countries and China are also introducing new research into alternative non-fuel uses for coal, such as carbon fibers, nanocarbons, graphene, soil amendments, and as an unconventional ore for critical elements. New to this edition: Each chapter is substantially changed from the 1st edition, including expanded and new literature citations and reviews, important new data and information, new features and materials, as well as reorganized and re-designed themes. Importantly, three new chapters cover global coal endowment and gas potential, groundwater systems related to coalbed gas production and biogenic gas generation, as well as the changing landscape of coal and coalbed gas influenced by global climate change and net-zero carbon greenhouse gas emissions.

FOREWORD When I reviewed the first edition of this book, my initial thought was, "Do we need another book on coal geology?" and then I read it and realised, "Yes, we need this book," and my students downloaded copies as soon as it was available. So now we come to 2023, and a lot has happened in the past decade. For a different reason, we might ask if we still need this book, or even coal geoscientists and engineers, as the world aims for rapid decarbonisation of the energy sector and a reduction of coal as a feedstock for industrial resources like steel manufacture.
