## Static Electricity & Transformations

SNOWdust  
creations

Atoms are the \_\_\_\_\_ particles of matter. Atoms contain \_\_\_\_\_ protons and negative electrons. These positive and negative charges in matter create electricity. An uncharged object has a \_\_\_\_\_ of positive and negative charges. A charged object has a \_\_\_\_\_ of either positive or negative charges. This build up is called \_\_\_\_\_ electricity. This happens when the negative charges move from one object to the other. The negatively charged object is \_\_\_\_\_ to a positively charged object or an uncharged object. When the objects come together, the negative charges \_\_\_\_\_ onto the other object and produce a tiny spark.

Electrically charged objects are attracted to uncharged objects. Circle the uncharged object.

Complete the models below by drawing the correct positive or negative charges on the blank balloons.
