**Spacecraft that Explored the Inner Planets Venus and Mercury** Thomas Lund, 2023-07-03 A series of increasingly capable spacecraft were sent to explore the inner planets Venus and Mercury The history of that planetary exploration is traced in this book along with the evolution of sophisticated spacecraft that unveiled long sought secrets of the planets The spacecraft were ingenious and reflected the best efforts of talented people working with the available technology of the day Additionally this book showcases engineering involved in those capable machines A consecutive series of 34 planetary spacecraft which span the time period 1961 to 2021 are described This includes the unsuccessful missions of several early spacecraft that paved the way for a better understanding of Venus hostile environments This book will describe many successful spacecraft sent to Venus by the Soviet Union and many successful spacecraft sent to Venus and to Mercury by the United States The recent exploration of Venus by the European Space Agency's Venus Express and the Japanese spacecraft Akatsuki can also be found in this book The author draws on over 50 years of experience on aircraft and spacecraft systems to tell the story of these planetary spacecraft The spacecraft experience includes being the technical lead for the landing radars on the Surveyor and Apollo lunar landers as well as providing analyses for the rendezvous radar for the Space Shuttle Practical engineering experience is augmented by Master's degrees in electrical engineering physics and business administration

**Cold, Hungry and in the Dark** Bill Powers, 2013-06-14 An energy industry insider delivers hard truths about the reality of fracking Conventional wisdom has North America entering a new era of energy abundance thanks to shale gas But has industry been honest Cold Hungry and in the Dark argues that declining productivity combined with increasing demand will trigger a crisis that will cause prices to skyrocket damage the economy and have a profound impact on the lives of nearly every North American Relying on faulty science bought and paid for white papers masquerading as independent research and industry consultants the shale promoters have vastly overstated the viable supply of shale gas resources for their own financial gain This startling expos written by an industry insider suggests that the stakes involved in the Enron scandal might seem like lunch money in comparison to the bursting of the natural gas bubble Exhaustively researched and rigorously documented Cold Hungry and in the Dark Puts supply and demand trends under a microscope Provides overwhelming evidence of the absurdity of the one hundred year supply myth Suggests numerous ways to mitigate the upcoming natural gas price spike The mainstream media has told us that natural gas will be cheap and plentiful for decades when nothing could be further from the truth Forewarned is forearmed Cold Hungry and in the Dark is vital reading for anyone concerned about the inevitable economic impact of our uncertain energy future Powers's step by step dismantling of the abundance myth ought to alarm policymakers corporate managers investors business owners and concerned citizens alike Kurt Cobb author of Prelude and contributor to The Christian Science Monitor *The Secure and the Dispossessed* Nick Buxton, Ben Hayes, 2015-11-20 While the world's scientists and many of its inhabitants despair at the impact of climate

change corporate and military leaders see nothing but opportunities For them melting ice caps mean newly accessible fossil fuels borders to be secured from climate refugees social conflicts to be managed and more failed states in which to intervene They are securing their assets at the expense of the planet and its inhabitants The Secure and the Dispossessed looks at these deadly approaches with a critical eye It also considers the flip side that the legitimacy of the elite is under unprecedented pressure from resistance by communities to resource grabs to those creating new ecological and socially just models for managing our energy food and water Topics covered include geoengineering militarism refugee protection greenwashing and the agricultural crisis among others Adaptation and resilience to a climate changed world is desperately needed but the form it will take will affect all of our futures Research Summary Jet Propulsion Laboratory (U.S.),1960

This Changes Everything Naomi Klein,2014-09-16 With strong first hand reporting and an original provocative thesis Naomi Klein returns with this book on how the climate crisis must spur transformational political change Connecting ICTs to Development Heloise Emdon,Laurent Elder,Ben Petrazzini,Richard Fuchs,2013-12-01 Over the past two decades projects supported by the International Development Research Centre IDRC have critically examined the ways in which information and communications technologies ICTs can be used to improve learning empower the disenfranchised generate income opportunities for the poor and facilitate access to healthcare in Africa Asia Latin America and the Caribbean Considering that most development institutions and governments are currently attempting to integrate ICTs into their practices it is an opportune time to reflect on the research findings that have emerged from IDRC s work and research in this area Connecting ICTs to Development discusses programmatic investments made by IDRC in a wide variety of areas related to ICTs including infrastructure access regulations health governance education livelihoods social inclusion technical innovation intellectual property rights and evaluation Each chapter in this book analyzes the ways in which research findings from IDRC supported projects have contributed to an evolution of thinking and discusses successes and challenges in using ICTs as tools to address development issues The volume also presents key lessons learned from ICT4D programming and recommendations for future work **Aflatoxins** Unnevehr, Laurian,Grace, Delia,2013-09-30 Aflatoxins are a naturally occurring carcinogenic byproduct of common fungi on grains and other crops particularly maize and groundnuts They pose a significant public health risk in many tropical developing countries and are also a barrier to the growth of domestic and international commercial markets for food and feed In recent years the aflatoxin problem has garnered greatly increased attention from both policy and donor communities around the globe What can be done to reduce the detrimental impacts of aflatoxins Because growth of the molds that produce aflatoxins is caused by multiple factors and because they must be controlled along the entire value chain from production to consumption only a robust multifaceted approach to controlling aflatoxins is likely to be effective The nineteen briefs in this set thus provide different perspectives on aflatoxin risks and solutions The analyses fall under four broad themes 1 what is known about the health risks from aflatoxins 2 how to

overcome market constraints to improved aflatoxin control by building new market channels and incentives 3 what is the international policy context for taking action in developing countries and 4 what is the state of research on new aflatoxin control technologies including new methods for aflatoxin detection crop breeding biological control food storage and handling and postharvest mitigation These briefs collectively provide a much clearer picture of the state of current efforts at combatting aflatoxins They also identify what gaps loom particularly large including the need for contry specific risk analysis and for testing integrated solutions for the entire supply chain in our global efforts to effectively reduce human exposure to aflatoxins and increase the economic returns to smallholders in agriculture

*Spacecraft Dynamics and Control* Enrico Canuto,Carlo Novara,Donato Carlucci,Carlos Perez-Montenegro,Luca Massotti,2018-03-08 Spacecraft Dynamics and Control The Embedded Model Control Approach provides a uniform and systematic way of approaching space engineering control problems from the standpoint of model based control using state space equations as the key paradigm for simulation design and implementation The book introduces the Embedded Model Control methodology for the design and implementation of attitude and orbit control systems The logic architecture is organized around the embedded model of the spacecraft and its surrounding environment The model is compelled to include disturbance dynamics as a repository of the

uncertainty that the control law must reject to meet attitude and orbit requirements within the uncertainty class The source of the real time uncertainty estimation prediction is the model error signal as it encodes the residual discrepancies between spacecraft measurements and model output The embedded model and the uncertainty estimation feedback noise estimator in the book constitute the state predictor feeding the control law Asymptotic pole placement exploiting the asymptotes of closed loop transfer functions is the way to design and tune feedback loops around the embedded model state predictor control law reference generator The design versus the uncertainty class is driven by analytic stability and performance inequalities The method is applied to several attitude and orbit control problems The book begins with an extensive introduction to attitude geometry and algebra and ends with the core themes state space dynamics and Embedded Model Control Fundamentals of orbit attitude and environment dynamics are treated giving emphasis to state space formulation disturbance dynamics state feedback and prediction closed loop stability Sensors and actuators are treated giving emphasis to their dynamics and modelling of measurement errors Numerical tables are included and their data employed for numerical simulations Orbit and attitude control problems of the European GOCE mission are the inspiration of numerical exercises and simulations The suite of the attitude control modes of a GOCE like mission is designed and simulated around the so called mission state predictor Solved and unsolved exercises are included within the text and not separated at the end of chapters for better understanding training and application Simulated results and their graphical plots are developed through MATLAB Simulink code

**The Greening of Antarctica** Alessandro Antonello, 2019 In *The Greening of Antarctica* Alessandro Antonello investigates the development of an international regime of environmental protection and management between the signing of the Antarctic Treaty in 1959 and the signing of the Convention on the Conservation of Antarctic Marine Living Resources in 1980 In those two decades the Antarctic Treaty parties and an international community of scientists reimagined what many considered a cold sterile and abiotic wilderness as a fragile and extensive regional ecosystem Antonello investigates this change by analyzing the negotiations and developments surrounding four environmental agreements the Agreed Measures for the Conservation of Antarctic Fauna and Flora in 1964 the Convention for the Conservation of Antarctic Seals in 1972 a voluntary restraint resolution on Antarctic mining in 1977 and the Convention on the Conservation of Antarctic Marine Living Resources in 1980 Though distant from world populations Antarctica has long been a site of inter state contest for geopolitical power and standing This book reveals how a range of contests geopolitical epistemic and imaginative created the environmental protection regime of the Antarctic Treaty System and discusses the tension between states individual searches for power and

the collective desire for stability in the region In this international and diplomatic context the actors were not only trying to keep relations between themselves orderly but they were also using treaties to order the human relationship with the environment Drawing on a wide range of international archives many newly opened The Greening of Antarctica offers the first detailed narrative of a crucial period in Antarctic history and reveals the contours of global environmental thought and diplomacy in the transformative Age of Ecology
