

Physics

End of Year Exam Revision

Topic 1: Forces and Motion

Speed and velocity

Speed and velocity are both measured in m/s (or km/h or mph). They both say how fast you're going:

- Speed is how fast you're going with no regard to the direction (e.g. 30mph or 20m/s).
- Velocity however must also have the direction specified (e.g. 30mph north or 20m/s, 060°).

Speed, distance and time are given the formula:

$$\text{Distance moved (d)} = \text{Average speed (s)} \times \text{Time taken (t)}$$

$$\text{Average speed (s)} = \text{Distance moved (d)} / \text{Time taken (t)}$$

Distance-time graphs

- 1) Gradient = speed.
- 2) Flat sections are where it's stopped.
- 3) The steeper the graph, the faster it's going.
- 4) Downhill sections mean it's going back towards its starting point.
- 5) Curves represent acceleration or deceleration.
- 6) A steepening curve means it's speeding up (increasing gradient).
- 7) A levelling off curve means it's slowing down (decreasing gradient).

Calculating speed from a D-T graph:

$$\text{Speed} = \text{gradient} = \text{vertical} / \text{horizontal}$$

Acceleration

Acceleration is not the same as velocity or speed:

- Acceleration is how quickly the velocity is changing.
- The change in velocity can be a change in speed or a changing in direction or both.

Acceleration is given the formula:

$$\text{Change in velocity (v - u)} = \text{Acceleration (a)} \times \text{Time taken (t)}$$
