Glattfelder, 2019-04-10 This open access book chronicles the rise of a new scientific paradigm offering novel insights into the age old enigmas of existence Over 300 years ago the human mind discovered the machine code of reality mathematics By utilizing abstract thought systems humans began to decode the workings of the cosmos From this understanding the current scientific paradigm emerged ultimately discovering the gift of technology Today however our island of knowledge is surrounded by ever longer shores of ignorance Science appears to have hit a dead end when confronted with the nature of reality and consciousness In this fascinating and accessible volume James Glattfelder explores a radical paradigm shift uncovering the ontology of reality It is found to be information theoretic and participatory yielding a computational and programmable universe

Neoclassical Theory of Electromagnetic Interactions Anatoli Babin, Alexander Figotin, 2016-08-04 In this monograph the authors present their recently developed theory of electromagnetic interactions This neoclassical approach extends the classical electromagnetic theory down to atomic scales and allows the explanation of various non classical phenomena in the same framework While the classical Maxwell Lorentz electromagnetism theory succeeds in describing the physical reality at macroscopic scales it struggles at atomic scales Here quantum mechanics traditionally takes over to describe non classical phenomena such as the hydrogen spectrum and de Broglie waves By means of modifying the classical theory the approach presented here is able to consistently explain quantum mechanical effects and while similar to quantum mechanics in some respects this neoclassical theory also differs markedly from it In particular the newly developed framework omits probabilistic interpretations of the wave function and features a new fundamental spatial scale which at the size of the free electron is much larger than the classical electron radius and is relevant to plasmonics and emission physics This book will appeal to researchers interested in advanced aspects of electromagnetic theory Treating the classical approach in detail including non relativistic aspects and the Lagrangian framework and comparing the neoclassical theory with quantum mechanics and the de Broglie Bohm theory this work is completely self contained Characterization of Ore-Forming Systems from Geological, Geochemical and Geophysical Studies K. Gessner, T.G. Blenkinsop, P. Sorjonen-Ward, 2018-08-07 Economically viable concentrations of mineral resources are uncommon in Earth's crust Most ore deposits that were mined in the past or are currently being extracted were found at or near Earth's surface often serendipitously To meet the future demand for mineral resources exploration success hinges on identifying targets at depth Achieving this requires accurate and informed models of the Earth's crust that are consistent with all available geological geochemical and geophysical information paired with an understanding of how ore forming systems relate to Earth's evolving structure Contributions to this volume address the future resources challenge by i applying advanced microscale geochemical detection and characterization methods ii introducing more rigorous 3D Earth models iii exploring critical behaviour and coupled processes

iv evaluating the role of geodynamic and tectonic setting and v applying 3D structural models to characterize specific ore forming systems

Nonlinear Reaction-Diffusion Systems Roman Cherniha, Vasyl' Davydovych, 2017-09-18 This book presents several fundamental results in solving nonlinear reaction diffusion equations and systems using symmetry

based methods Reaction diffusion systems are fundamental modeling tools for mathematical biology with applications to ecology population dynamics pattern formation morphogenesis enzymatic reactions and chemotaxis The book discusses the properties of nonlinear reaction diffusion systems which are relevant for biological applications from the symmetry point of view providing rigorous definitions and constructive algorithms to search for conditional symmetry a nontrivial generalization of the well known Lie symmetry of nonlinear reaction diffusion systems In order to present applications to population dynamics it focuses mainly on two and three component diffusive Lotka Volterra systems While it is primarily a valuable guide for researchers working with reaction diffusion systems and those developing the theoretical aspects of conditional symmetry conception parts of the book can also be used in master s level mathematical biology courses

Symmetry in Complex Systems J. A. Tenreiro Machado, António M. Lopes, 2021-01-21 Complex systems with symmetry arise in many fields at various length scales including financial markets social transportation telecommunication and power grid networks world and country economies ecosystems molecular dynamics immunology living organisms computational systems and celestial and continuum mechanics The emergence of new orders and structures in complex systems means symmetry breaking and transitions from unstable to stable states Modeling complexity has attracted many researchers from different areas dealing both with theoretical concepts and practical applications This Special Issue fills the gap between the theory of symmetry based dynamics and its application to model and analyze complex systems *Earth Science for Civil and Environmental Engineers* Richard E. Jackson, 2019-01-24 Introduces the fundamental principles of applied Earth science needed for engineering practice with case studies exercises and online solutions **Data-driven Modelling and Scientific Machine Learning in Continuum Physics** Krishna Garikipati, 2024-07-29 This monograph takes the reader through recent advances in data driven methods and machine learning for problems in science specifically in continuum physics It develops the foundations and details a number of scientific machine learning approaches to enrich current computational models of continuum physics or to use the data generated by these models to infer more information on these problems The perspective presented here is drawn from recent research by the author and collaborators Applications drawn from the physics of materials or from biophysics illustrate each topic Some elements of the theoretical background in continuum physics that are essential to address these applications are developed first These chapters focus on nonlinear elasticity and mass transport with particular attention directed at descriptions of phase separation This is followed by a brief treatment of the finite element method since it is the most widely used approach to solve coupled partial differential equations in continuum physics With these foundations established the treatment proceeds to a number of recent developments in data driven methods and scientific machine learning in the context of the continuum physics of materials and biosystems This part of the monograph begins by addressing numerical homogenization of microstructural response using feed forward as well as convolutional neural networks Next is surrogate optimization using multifidelity learning for problems of phase evolution Graph theory

bears many equivalences to partial differential equations in its properties of representation and avenues for analysis as well as reduced order descriptions all ideas that offer fruitful opportunities for exploration Neural networks by their capacity for representation of high dimensional functions are powerful for scale bridging in physics an idea on which we present a particular perspective in the context of alloys One of the most compelling ideas in scientific machine learning is the identification of governing equations from dynamical data another topic that we explore from the viewpoint of partial differential equations encoding mechanisms This is followed by an examination of approaches to replace traditional discretization based solvers of partial differential equations with deterministic and probabilistic neural networks that generalize across boundary value problems The monograph closes with a brief outlook on current emerging ideas in scientific machine learning

Active Learning: Theoretical Perspectives, Empirical Studies and Design Profiles Robert Cassidy,Elizabeth S. Charles,James D. Slotta,Nathaniel Lasry,2019-07-11 This book represents the emerging efforts of a growing international network of researchers and practitioners to promote the development and uptake of evidence based pedagogies in higher education at something a level approaching large scale impact By offering a communication venue that attracts and enhances much needed partnerships among practitioners and researchers in pedagogical innovation we aim to

change the conversation and focus on how we work and learn together i.e. extending the implementation and knowledge of co design methods In this first edition of our Research Topic on Active Learning we highlight two of the three types of publications we wish to promote First are studies aimed at understanding the pedagogical designs developed by practitioners in their own practices by bringing to bear the theoretical lenses developed and tested in the education research community These types of studies constitute the practice pull that we see as a necessary counterbalance to knowledge push in a more productive pedagogical innovation ecosystem based on research practitioner partnerships Second are studies empirically examining the implementations of evidence based designs in naturalistic settings and under naturalistic conditions Interestingly the teams conducting these studies are already exemplars of partnerships between researchers and practitioners who are uniquely positioned as in between straddling the two worlds As a result these publications represent both the rigours of research and the pragmatism of reflective practice In forthcoming editions we will add to this collection a third type of publication design profiles These will present practitioner developed pedagogical designs at varying levels of abstraction to be held to scrutiny amongst practitioners instructional designers and researchers alike We hope by bringing these types of studies together in an open access format that we may contribute to the development of new forms of practitioner researcher interactions that promote co design in pedagogical innovation
