Gehan Anthonys, 2022-06-01 The investigation of the behavior of ferromagnetic particles in an external magnetic field is

important for use in a wide range of applications in magnetostatics problems from biomedicine to engineering To the best of the author's knowledge the systematic analysis for this kind of investigation is not available in the current literature Therefore this book contributes a complete solution for investigating the behavior of two ferromagnetic spherical particles immersed in a uniform magnetic field by obtaining exact mathematical models on a boundary value problem While there are a vast number of common numerical and analytical methods for solving boundary value problems in the literature the rapidly growing complexity of these solutions causes increase usage of the computer tools in practical cases We analytically solve the boundary value problem by using a special technique called a bispherical coordinates system and the numerical computations were obtained by a computer tool In addition to these details we will present step by step instructions with simple explanations throughout the book in an effort to act as inspiration in the reader's own modeling for relevant applications in science and engineering On the other hand the resulting analytical expressions will constitute benchmark solutions for specified geometric arrangements which are beneficial for determining the validity of other relevant numerical techniques The generated results are analyzed quantitatively as well as qualitatively in various approaches Moreover the methodology of this book can be adopted for real world applications in the fields of ferrohydrodynamics applied electromagnetics fluid dynamics electrical engineering and so forth Higher level university students academics engineers scientists and researchers involved in the aforementioned fields are the intended audience for this book
