LAB: BALL AND RAMP

Problem: What two things determine the amount of force that acts on an object? In this lab, you will use a plastic cup and two balls with different weights. You will be dropping each of the balls from different heights to determine if weight or height has an effect on the amount of force.

Hypothesis: Fill in each statement below with *increase*, *decrease* or *stay the same*.

1. If I increase the mass of the ball, then the force will _____
2. If I increase the height of the ball, then the force will _____

Materials: books, balls, cup with weight, mat, ruler, lab

Procedure:

1. There are 3 dark lines drawn on your ramp. Using the ruler, carefully measure the distance from the bottom of the ramp to the lowest line. Record this measurement in your data table. Repeat for the middle and top lines.
2. Place the plastic cup so it lines up with the outline on the mat. The opening should be facing the ball.
3. Start with the lighter ball. Measure the ball using the digital scale. Record the measurement on the data table.
4. Place the ball on the ramp so that the front of the ball is on the lowest line on the ramp. Let it go.
5. Using your ruler on the mat, measure how far the cup moved after being hit by the ball. Measure where the front of the cup reached. Record this in your data table. Repeat 2 more times (3 times total).
6. Repeat for the middle line and the top line. Record on your data table.
7. Repeat steps 2-5 for the middle line and the top line on the ramp.
8. Repeat all steps for the heavier ball.
9. Find the average distance for each height. Add up all 3 numbers and divide by 3.
