Jordan Canonical Form Steven H. Weintraub, 2022-06-01 Jordan Canonical Form JCF is one of the most important and useful concepts in linear algebra The JCF of a linear transformation or of a matrix encodes all of the structural information about that linear transformation or matrix This book is a careful development of JCF After beginning with background material we introduce Jordan Canonical Form and related notions eigenvalues generalized eigenvectors and the characteristic and minimum polynomials We decide the question of diagonalizability and prove the Cayley Hamilton theorem Then we present a careful and complete proof of the fundamental theorem Let V be a finite dimensional vector space over the field of complex numbers \mathbb{C} and let $T: V \rightarrow V$ be a linear transformation Then T has a Jordan Canonical Form This theorem has an equivalent statement in terms of matrices Let A be a square matrix with complex entries Then A is similar to a matrix J in Jordan Canonical Form i e there is an invertible matrix P and a matrix J in Jordan Canonical Form with $A = PJP^{-1}$ We further present an algorithm to find P and J assuming that one can factor the characteristic polynomial of A In developing this algorithm we introduce the eigenstructure picture ESP of a matrix a pictorial representation that makes JCF clear The ESP of A determines J and a refinement the labeled eigenstructure picture LESP of A determines P as well We illustrate this algorithm with copious examples and provide numerous exercises for the reader Table of Contents Fundamentals on Vector
