Towards Scientific Literacy Derek Hodson,2008-01-01 This book is a guide for teachers student teachers teacher educators science education researchers and curriculum developers who wish to get to grips with the vast and complex literature encompassing the history of science philosophy of science and sociology of science HPS A number of books cover essentially the same ground but what makes this book unique is that it is written from the perspective of science education The author s purpose is twofold First to identify clarify and critique elements in the HPS literature that are of key importance in developing students scientific and technological literacy as defined in the opening chapter of the book Second to enhance teachers capacity to build and present curricula that afford a much higher profile to HPS than has been traditional The significance of the book can be judged from the prominence given to nature of science understanding in much recent international debate and writing in science education and in the plethora of influential reports on science and technology education published around the world that identify HPS knowledge and understanding as central components of 21st century science education What Expert Teachers Do John Loughran,2012-07-26 How do expert teachers do it How do they enhance student learning How do they manage the dilemmas and tensions inherent in working with 25 different students in

every lesson Internationally respected teacher educator John Loughran argues that teachers knowledge of what they do is largely tacit and often misunderstood In this book he distils the essence of professional practice for classroom teachers Drawing on the best research on pedagogy he outlines the crucial principles of teaching and learning and shows how they are translated into practice using real classroom examples He emphasises that teaching procedures need to be part of an integrated approach so that they are genuinely meaningful and result in learning Throughout he shows how teachers can engage their students in ways that create a real need to know and a desire to become active learners What Expert Teachers Do is for teachers who want to become really accomplished practitioners Australian national bibliography ,1961 **New Trends in Integrated Science Teaching** P.
