Hegel Charles Taylor,1977-05-12 A major and comprehensive study of the philosophy of Hegel his place in the history of ideas and his continuing relevance and importance Professor Taylor relates Hegel to the earlier history of philosophy and more particularly to the central intellectual and spiritual issues of his own time He sees these in terms of a pervasive tension between the evolving ideals of individuality and self realization on the one hand and on the other a deeply felt need to find significance in a wider community Charles Taylor engages with Hegel sympathetically on Hegel s own terms and as the the subject demands in detail We are made to grasp the interconnections of the system without being overwhelmed or overawed by its technicality We are shown its importance and its limitations and are enabled to stand back from it

Johnston, Lindy Nahmad-Williams, 2014-09-19 First published in 2008 Routledge is an imprint of Taylor Francis an informal company Reversing the Arrow of Time Bryan W. Roberts, 2022-12-08 The arrow of time refers to the curious asymmetry that distinguishes the future from the past Reversing the Arrow of Time argues that there is an intimate link between the symmetries of time itself and time reversal symmetry in physical theories which has wide ranging implications for both physics and its philosophy This link helps to clarify how we can learn about the symmetries of our world how to understand the relationship between symmetries and what is real and how to overcome pervasive illusions about the direction of time Roberts explains the significance of time reversal in a way that intertwines physics and philosophy to establish what the arrow of time means and how we can come to know it This book is both mathematically and philosophically rigorous yet remains accessible to advanced undergraduates in physics and philosophy of physics This title is also available as Open Access on Cambridge Core **The Couple** Ferdinand Fellmann, 2016 The mating couple is considered as both the origin and the foundation of a strong social self Despite increasing self realization the individual always is in need of being justified through an intimate relationship in which both partners accept one another such as they are In view of the process of global urbanization this book shows how empathy and reliability are the royal road to overcoming existential loneliness Series Development in Humanities Vol 14 Subject Sociology **Choose Trust** Stuart Maister, Kevin Vaughan-Smith, 2025-01-16 Trust is the basis of all relationships at work and beyond We naturally want to bond with people we can relate to and rely on and vice versa That's why creating meaningful working relationships by trusting and being trustworthy adds value Whether you're leading a team building partnerships selling or collaborating it's trust that makes the difference Choose Trust shows you how to create that value by harnessing three elements of the authors Trust Triangle clarity character and capability It gives you the tools to be intentional about trust and to position yourself and your organisation for success **Beyond Reduction** Steven Horst, 2007-08-30 Contemporary philosophers of mind tend to assume that the world of nature can be reduced to basic physics Yet there are features of the mind consciousness intentionality normativity that do not seem to be reducible to physics or neuroscience This explanatory gap between mind and brain has thus been a major cause of concern in recent philosophy of mind Reductionists hold that despite all appearances the mind can be reduced to the brain Eliminativists hold that it cannot and that this implies that there is something illegitimate about the mentalistic vocabulary Dualists hold that the mental is irreducible and that this implies either a substance or a property dualism Mysterian non reductive physicalists hold that the mind is uniquely irreducible perhaps due to some limitation of our self understanding In this book Steven Horst argues that this whole conversation is based on assumptions left over from an outdated philosophy of science While reductionism was part of the philosophical orthodoxy fifty years ago it has been decisively rejected by philosophers of science over the past thirty years and for good reason True reductions are in fact exceedingly rare in the sciences and the conviction that they were there to be found was an artifact of armchair assumptions of 17th century Rationalists and 20th

century Logical Empiricists The explanatory gaps between mind and brain are far from unique In fact in the sciences it is gaps all the way down And if reductions are rare in even the physical sciences there is little reason to expect them in the case of psychology Horst argues that this calls for a complete re thinking of the contemporary problematic in philosophy of mind Reductionism dualism eliminativism and non reductive materialism are each severely compromised by post reductionist philosophy of science and philosophy of mind is in need of a new paradigm Horst suggests that such a paradigm might be found in Cognitive Pluralism the view that human cognitive architecture constrains us to understand the world through a plurality of partial idealized and pragmatically constrained models each employing a particular representational system optimized for its own problem domain Such an architecture can explain the disunities of knowledge and is plausible on evolutionary grounds
