

The distance from the beginning of the takeoff roll to 35R geometric height of the lowest case of the airplane plus 10% safety margin is the **accelerate-stop distance (ASD)**.

The distance from the actual stop to 35R is called **take-off distance (TOD)**. The distance from the beginning of the roll to the actual stop plus half of the take-off distance as safety margin is compensated for a variation of pilot error.

**All engine Takeoff Distance (TOD)**

Figure 101: TOD-ASD

The **takeoff distance engine failure (TOD OE)** is the distance required to 35R height in the event the critical engine fails. As in the all-engine case the TOD<sub>OE</sub> is the distance to the actual stop plus half the take-off distance for this condition, again, to compensate for variations in pilot error.

The **accelerate-stop distance (ASD)** is the distance required to accelerate the plane to a certain airspeed, then to stop the plane within the safety margin (35R) plus 10% safety margin for pilot error.

The **accelerate-stop distance (ASD)** is the distance required to accelerate the plane to a certain airspeed, then to stop the plane within the safety margin (35R) plus 10% safety margin for pilot error.

ASD TOD TOD<sub>OE</sub> ASD is the distance required to accelerate the plane to a certain airspeed, then to stop the plane within the safety margin (35R) plus 10% safety margin for pilot error. TOD is the distance from the beginning of the roll to the actual stop plus half of the take-off distance as safety margin is compensated for a variation of pilot error. TOD<sub>OE</sub> is the distance from the beginning of the roll to the actual stop plus half of the take-off distance as safety margin is compensated for a variation of pilot error.

**Accelerate-Stop Distance (ASD)**

The **largest distance of TOD, TOD<sub>OE</sub> and ASD** is the take-off length required for takeoff.

Usually this is determined usually the other way around by adjusting the take-off speed to the current conditions. The speed of the accelerate engine (TOD, TOD<sub>OE</sub> and ASD) and the maximum takeoff mass (MTOM) is the take-off length.
