Sullivan,2016-12 During World War II the lives of millions of

Americans lay precariously in the hands of a few brilliant scientists who raced to develop the first weapon of mass destruction Elected officials gave the scientists free rein in the Manhattan Project without understanding the complexities and dangers involved in splitting the atom The Manhattan Project was the first example of a new type of choice for congressmen presidents and other government officials life and death on a national scale From that moment our government began fashioning public policy for issues of scientific development discoveries and inventions that could secure or threaten our existence and our future But those same men and women had no training in such fields did not understand the ramifications of the research and relied on incomplete information to form potentially life changing decisions Through the story of the Manhattan Project Neil J Sullivan asks by what criteria the people in charge at the time made such critical decisions He also ponders how similar judgments are reached today with similar incomprehension from those at the top as our society dives down the potential rabbit hole of bioengineering nanotechnology and scientific developments yet to come

spiritual idealism Cognitive Action Theory CAT achieves this unification by recognizing that the observer's existence is the foundational premise underlying all scientific inquiry It develops as an event oriented physical theory in which the first person observer is central By analyzing the methods through which we human observers gain knowledge and create the belief systems within which our experiences are explained we discover a fundamental truth all systems are observers and exhibit some form of internal awareness Events not the objects appearing in them are the fundamental building blocks of reality The book is comprised of three parts the first addresses the paradigm shift from an object to an event oriented world view the second develops the foundations of action physics for an event oriented world view and the third provides examples of how these new ideas can be applied to move our knowledge up the next evolutionary step of human development This book will benefit anyone questioning their role in the universe especially those in interdisciplinary fields of philosophy psychology neuroscience and medicine who seek understanding of quantum theory as the physics of conscious systems that know the world
