

# Trauma Symptom Inventory-2 (TSI™-2)

The Trauma Symptom Inventory-2 (TSI-2) is a revised version of the Trauma Symptom Inventory (TSI™; Briere, 1995), a widely used test of trauma-related symptoms and behaviors.

This measure evaluates acute and chronic symptomatology, including, but not limited to, the effects of:

|                               |   |
|-------------------------------|---|
| • Sexual and physical assault | • Intimate partner violence                   |
| • Combat                      | • Torture                                     |
| • Motor vehicle accidents     | • Mass casualty events                        |
| • Medical trauma              | • Witnessing violence or other trauma         |
| • Traumatic losses            | • Early experiences of child abuse or neglect |

It evaluates symptomatology associated with trauma at any point in the respondent's lifespan; it does not link symptoms to a single stressor or specific point in time.
