Data manipulation language (DML) statements add, change, and delete Oracle

Database table data. A transaction is a sequence of one or more SQL statements that Oracle Database treats as a unit; either all of the statements are performed, or none of them are.

About Data Manipulation Language (DML) Statements

Data manipulation language (DML) statements access and manipulate data in existing tables.

About Transaction Control Statements

A transaction is a sequence of one or more SQL statements that Oracle Database treats as a unit; either all of the statements are performed, or none of them are. You need transactions to model business processes that require that several operations be performed as a unit.

Committing Transactions

Committing a transaction makes its changes permanent, marks its savepoints, and releases its locks.

Rolling Back Transactions

Rolling back a transaction undoes its changes. You can roll back the entire current transaction, or you can roll it back only to a specified savepoint.

Setting Savepoints in Transactions

The SAVEPOINT statement marks a savepoint in a transaction—a point to which you can later roll back. Savepoints are optional, and a transaction can have multiple savepoints.
