The Morphosyntax of Transitions Víctor Acedo-Matellán, 2016 This book examines the cross linguistic expression of changes of location or state taking as a starting point Talmy's typological generalization that classifies languages as either satellite framed or verb framed In verb framed languages such as those of the Romance family the information about the predicate is encoded by the verb Satellite framed languages on the other hand can be further subdivided into weak satellite framed languages in which the information is expressed by a prefix on the verb and strong satellite framed languages in which it is expressed by a preposition In this volume Víctor Acedo Matellán explores the similarities between Latin and Slavic in their expression of events of transition neither allows the expression of complex adjectival resultative constructions and both express the result state or location of a complex transition through prefixes They are therefore analysed as weak satellite framed languages along with Ancient Greek and some varieties of Mandarin Chinese and stand in contrast to strong satellite framed languages such as English the Germanic languages in general and Finno Ugric This variation is explained in terms of the morphological properties of the head expressing transition Path which is argued to be prefixal in weak but not in strong satellite framed languages On the other hand in verb framed languages like Romance Path is strictly adjacent to the eventive head v The analysis is couched in a neo constructionist approach to argument structure which accounts for the verbal elasticity shown by Latin and a Distributed Morphology approach to the syntax morphology interface

Alistair Steyn-Ross,Moira Steyn-Ross,2010-03-14 Foreword by Walter J Freeman The induction of unconsciousness using anesthetic agents demonstrates that the cerebral cortex can operate in two very different behavioral modes alert and responsive vs unaware and quiescent But the states of wakefulness and sleep are not single neuron properties they emerge as bulk properties of cooperating populations of neurons

with the switchover between states being similar to the physical change of phase observed when water freezes or ice melts. Some brain state transitions such as sleep cycling, anesthetic induction, epileptic seizure, are obvious and detected readily with a few EEG electrodes; others such as the emergence of gamma rhythms during cognition or the ultra slow BOLD rhythms of relaxed free association are much more subtle. The unifying theme of this book is the notion that all of these bulk changes in brain behavior can be treated as phase transitions between distinct brain states. **Modeling Phase Transitions in the Brain** contains chapter contributions from leading researchers who apply state space methods, network models, and biophysically motivated continuum approaches to investigate a range of neuroscientifically relevant problems that include analysis of nonstationary EEG time series, network topologies that limit epileptic spreading, saddle node bifurcations for anesthesia, sleep cycling, and the wake-sleep switch, prediction of dynamical and noise-induced spatiotemporal instabilities underlying BOLD, alpha and gamma band Hopf oscillations, gap junction moderated Turing structures, and Hopf-Turing interactions leading to cortical waves. **Phase Transitions in Liquid Crystals** Arthur N. Chester, S.

Martellucci, 2013-06-29 The Nato Advanced Study Institute Phase Transitions in Liquid Crystals was held May 2-12, 1991 in Erice, Sicily. This was the 16th conference organized by the International School of Quantum Electronics under the auspices of the Ettore Majorana Centre for Scientific Culture. The subject of Liquid Crystals has made amazing progress since the last ISQE Course on this subject in 1985. The present Proceedings give a tutorial introduction to today's most important areas as well as a review of current results by leading researchers. We have brought together some of the world's acknowledged experts in the field to summarize both the present state of their research and its background. Most of the lecturers attended all the lectures and devoted their spare hours to stimulating discussions. We would like to thank them all for their admirable contributions. The Institute also took advantage of a very active audience; most of the students were active researchers in the field and contributed with discussions and seminars. Some of these student seminars are also included in these Proceedings. We did not modify the original manuscripts in editing this book, but we did group them according to the following topics: 1 Theoretical Foundations, 2 Thermotropic Liquid Crystals, 3 Ferroelectric Liquid Crystals, 4 Polymeric Liquid Crystals, and 5 Lyotropic Liquid Crystals. The Middle East Economies in Times of Transition Ahmed Galal, Ishac Diwan, 2016-04-08 Diwan and Galal look at the structure and prospects of the Middle East economies after the 2011 Uprisings, focusing on issues of economic growth, inequality, the impact of oil, and the unfolding political transitions. On the growth question, the book looks into the extent of structural transformation of the economy, the political economy reasons for the lack of structural change, and the external conditions in the EU and in the GCC that underpin the lack of structural change. On inequality, the book offers new measures of equality of opportunity in human development and in the job market, and it also reviews the complex political economy of subsidy removal. Regarding natural resources, the volume provides three innovations connecting the notion of oil curse to the global phenomena of asset bubbles: evidence that resource curse effects do not rise monotonically.

with the size of the resource rent but rather according to an inverted U shape and an extension of the concept of rent to the other non oil rents that are also predominant in the region Finally the volume places the political transition in the region in a global perspective using various methods theoretical comparative and empirical and it explores the relationship between democracy in its variety of forms and economic development

Politics Of Climate Change: Crises, Conventions And Cooperation

Reena Marwah,Swarn Singh,2023-01-19 The year 2020 was a watershed event in the history of climate change politics It marked the end of the second commitment period of the Kyoto Protocol and the beginning of the ambitious Paris Agreement It was also the year of the pandemic where the disruption caused severe implications on a global scale The pandemic also brought before the world the severity and scale of the transboundary challenges in a globally interconnected world It exposed the weaknesses of the global institutions and governance structures in tackling the complex and imminent threat of climate change As states prepare for the future of global climate change negotiations post the COP26 event of 2021 there has been a significant shift in the politics of climate change at all levels The negotiations took place in the shadows of the pandemic which has challenged the political lethargy and non committal attitudes of states on the climate change question Unlike in the past climate change is now a hot issue on the political high tables It has also spilled outside these negotiating spaces and into the public sphere Whether it is the school strikes led by children or the indigenous struggles of marginalized populations the politics of climate change today is far more diverse representative and active At the same time we can witness the shifts in the state's understanding of the problem which is actively inquiring about its security and geopolitical dimensions The boundaries between traditional and non traditional threats to security are getting blurred as climate change and its myriad impacts wreak havoc on ecosystem resilience the state's welfare capacity and people's everyday lives Hence this volume seeks to decipher the nature of global climate change politics in the post pandemic and climate insecure world Who will be its main actors main stakeholders and losers How will questions of equity sustainability and finance interplay at the COP26 event and thereafter How will developing and poor countries engage with the issue in the next phase of climate politics Finally how will the ambition of the Paris Agreement which is reflected in the language of net zero targets and the two degrees Celsius temperature goals be brought into action

Africa's Energy Transition George Anachebe Nwangwu,2025-08-20 This book examines the critical challenges and opportunities surrounding climate change and the energy transition in Africa While many Africans prioritize pressing concerns such as food scarcity economic development and unemployment the book argues

that the continent remains particularly vulnerable to climate related impacts Erratic weather patterns and extreme events exacerbate existing issues including declining agricultural productivity infrastructure damage and political instability Despite these challenges the transition from fossil fuels to renewable energy presents significant economic opportunities for Africa The book emphasizes that embracing this shift can help African countries transform their economies and strengthen resilience against climate change It contends that the current international framework where Africa has largely anchored its demands around climate justice has yielded little tangible benefit for Africans Instead the book advocates for a shift in perspective rather than focusing solely on historical emissions from the Global North African nations should recognize the potential advantages of actively participating in the global energy economy By seizing the opportunities inherent in this transition African countries can reshape their economies and capitalize on emerging energy markets
