IUTAM Symposium on the Vibration Analysis of Structures with Uncertainties Alexander K. Belyaev, Robin S. Langley, 2010-12-02 The Symposium was aimed at the theoretical and numerical problems involved in modelling the dynamic response of structures which have uncertain properties due to variability in the manufacturing and assembly process with automotive and aerospace structures forming prime examples It is well known that the difficulty in predicting the response statistics of such structures is immense due to the complexity of the structure the large number of variables which might be uncertain and the inevitable lack of data regarding the statistical distribution of these variables The Symposium participants presented the latest thinking in this very active research area and novel techniques were presented covering the full frequency spectrum of low mid and high frequency vibration problems It was demonstrated that for high frequency vibrations the response statistics can saturate and become independent of the detailed distribution of the uncertain system parameters A number of presentations exploited this physical behaviour by using and extending methods originally developed in both phenomenological thermodynamics and in the fields of quantum mechanics and random matrix theory For low frequency vibrations a number of presentations focussed on parametric uncertainty modelling for example probabilistic models interval analysis and fuzzy descriptions and on methods of propagating this uncertainty through a large dynamic model in an efficient way At mid frequencies the problem is mixed and various hybrid schemes were proposed It is clear that a comprehensive solution to the problem of predicting the vibration response of uncertain structures across the whole frequency range requires expertise across a wide range of areas including probabilistic and non probabilistic methods interval and info gap analysis statistical energy analysis statistical thermodynamics random wave approaches and large scale computations and this IUTAM symposium presented a unique opportunity to bring together outstanding international experts in these fields
