How do we recognize quality in drama? *Starting Drama Teaching* is a comprehensive guide to the teaching of drama in schools. Exploring the aims and purposes of drama, it provides an insight into the theoretical perspectives that underpin practice alongside activities, example lesson plans and approaches to planning. Written in an accessible style, the book addresses such practical issues as setting up role play, how to inject depth into group drama, working with text, teaching playwriting as well as common problems that arise in the drama classroom and how to avoid them. This fourth edition has been updated to reflect the latest educational thinking and developments in policy and includes a new chapter on researching drama, an extra section on digital technology and drama guidance on different approaches to drama, advice on how teachers can achieve and recognize quality work in drama, a discussion of drama concepts including applied theatre, ensemble and rehearsal approaches. Acting on the growing interest in drama both as a separate subject and as a teaching methodology, this book is full of sensible practical advice for teachers using drama at all levels and in all kinds of different school contexts. Written by an internationally recognized leading name in drama education, this book is valuable reading for trainee teachers who are new to drama and teachers who wish to update and broaden their range. **Glencoe Algebra 1**, 2001 **Numeracy in Authentic Contexts** Maura Sellars, 2017-10-25 This book is based on the notion that there are many ways in which mathematics learning can be achieved for students and that not all of them are focused on the mathematics classroom. It explores the foundational numeracy principles of the non-mathematical subject areas and aligns these to the Australian numeracy learning continuum. It demonstrates in detail the extent to which numeracy competencies underpin successful learning in all the subject areas of the curricula. It validates a focus of developing numeracy competencies through learning in the arts, science and other discipline areas with which school students to engage with in order to develop holistically but which are not subjected to national assessment practices. It is developed around the notion of praxis, putting theory into practice in order to respond to the urgent need for students to be supported in their efforts to increase their numeracy capabilities in a world where extensive amounts of new information are often presented in graphical or data-based formats. Additionally, it offers perspectives on developing all students' capacities to become numerate in school contexts and presents inclusive differentiated lesson examples as an alternative way of exploring numeracy in the context of teaching and learning in real-world classroom contexts. **Resources in Education**, 1975 Serves as an index to Eric reports microform.
