health policy concerns *Sleep Related Disorders and Internal Diseases* Jörg H. Peter, Thomas Podszus, P.v. Wichert, 2013-11-11 The normal function of the organism in various stages of activity can be seen as a process of mutual interaction of different regulation mechanisms building up the behaviour of the organism in changing situations and or ages and or levels of health or disease Insights into these very complex relations which steer the action of the organism are particularly important for the study of internal medicine They can be seen as directly related to the understanding of pathological conditions Recently the medical community has focused its interest on the physiology and pathophysiology of events which happen during sleep Although some information on pathological regulation during sleep was collected in the 1930s the modern technology of registration methods is required to analyse the phenomena of sleep related physiological and pathophysiological patterns It is interesting that the modern research in this field developed from neuropsychiatry and is now expanding into other fields of medicine although some problems for instance the Pickwickian syndrome were also for a long time considered part of the field of internal medicine It becomes clearer that sleep is not only a neuro psychiatric phenomenon but also has profound consequences for other physiological circuits perhaps even an important role in pathogenesis Sleep also has profound consequences for internal diseases This was shown very clearly recently by many groups although their data have not yet received the attention which they deserve **Flying Magazine** ,1968-09
