

2. Suppose that in a town, 800 people are selected by random. 280 go to work by car only, 220 go to work by bicycle only and 140 use both ways – sometimes go with a car and sometimes with a bicycle.

- How many people go to work by car only? **280**
- How many people go to work by bicycle only? **220**
- How many people go by neither car nor bicycle? **160**
- How many people use at least one of both transportation types?
- How many people use only one car or bicycle?

$$\begin{aligned}
 \text{C. } n(C \cup B)' &= U - n(C \cup B) \\
 &= 800 - (280 + 140 + 220) \\
 &= 800 - 640 \\
 &= 160
 \end{aligned}$$

Venn Diagram Problem And There Solution:

A Beginner's Guide to Discrete Mathematics W.D. Wallis,2013-03-14 This text is a basic introduction to those areas of discrete mathematics used by students of mathematics and computer science Introductory courses on this material are now standard at many colleges and universities Usually these courses are of one semester's duration and usually they are offered at the sophomore level Very often this will be the first course where the students see several real proofs The preparation of the students is very mixed and one cannot assume a strong background In particular the instructor should not assume that the students have seen a linear algebra course or any introduction to number systems that goes beyond college algebra In view of this I have tried to avoid too much sophistication while still retaining rigor I hope I have included enough problems so that the student can reinforce the concepts Most of the problems are quite easy with just a few difficult exercises scattered through the text If the class is weak a small number of sections will be too hard while the instructor who has a strong class will need to include some supplementary material I think this is preferable to a book at a higher mathematical level which will scare away weaker students

Lectures, Problems And Solutions For Ordinary Differential Equations (Second Edition) Yuefan Deng,2017-08-11 This unique book on ordinary differential equations addresses practical issues of composing and solving differential equations by demonstrating the detailed solutions of more than 1 000 examples The initial draft was used to teach more than 10 000 advanced undergraduate students in engineering physics economics as well as applied mathematics It is a good source for students to learn problem solving skills and for educators to find problems for homework assignments and tests The 2nd edition with at least 100 more examples and five added subsections has been restructured to flow more pedagogically
