Venture Capital Schemes Manual:

Incentivising Angels Stephen Barkoczy, Tamara Wilkinson, 2019-04-24 This book examines tax incentives for investors in start up companies through a critical analysis of Australia's early stage investors ESI program and a comparison of that program with the United Kingdom's Seed Enterprise Investment Scheme SEIS upon which it is loosely modelled. It discusses the importance of innovation and the special role that venture capital plays in supporting start ups and explains the policy rationale for introducing the ESI program as well as dissecting its technical requirements in detail. Special attention is devoted to the program's early stage and innovation requirements which are crucial for determining whether a start up qualifies for the tax incentives. The book is the first in depth scholarly legal analysis of the ESI program and the first occasion it has been compared and contrasted with a foreign program. The comparative discussion of the ESI program with the SEIS program enables the authors to make suggestions for reforms to the ESI program so that it can better achieve its policy objectives. The fact that the book includes reform suggestions makes it particularly interesting for policy makers. It is also of broad relevance to legal and finance scholars and students as well as entrepreneurs, angels, venture capitalists and their advisors.

Accelerators Mike Wright, 2018 Accelerators are a rapidly growing new form of organization that aim to stimulate entrepreneurship through intensive limited period educational programs including mentoring and networking for the cohort of start up participants selected for each program to improve their ability to attract investment at the end of the program. Drawing on novel evidence from across the world, this is the first book to provide rigorous analysis of the nature and effectiveness of accelerators that will be invaluable for researchers, policymakers and entrepreneurs.

Venture Capital Investment and Government Incentives Tamara Wilkinson, 2024-09-05 This book explores the best ways for governments to design venture capital investment incentives. Venture capital is a multi billion dollar industry and a major driver of innovation and national growth. Investment in startup companies by venture capital funds helps finance new inventions and create wealth, economic growth and jobs. However, because venture capital investment is highly risky and sensitive to market downturns, many governments around the world use special legal and tax incentives to help encourage this form of investment. Since the introduction of the first venture capital incentive in the USA in 1958, scores of venture capital incentives have come and gone. These incentives have experienced varied success, with some failing entirely. Filling a gap in an important area, this book employs a legal and regulatory approach to examine venture capital policy from a global perspective. It uses an analytical framework to evaluate the design, implementation and success of incentives and looks at over 60 examples from 25 countries around the world. The book is aimed at researchers and policy makers in law, finance and economics as well as practitioners and investors in the venture capital space. The book introduces the legal aspects of venture capital investment and presents a list of leading

practice guidelines and recommendations to help policy makers design effective efficient and appropriate venture capital incentives
