Mechanical Ventilation from Pathophysiology to Clinical Evidence Giacomo Bellani, 2022-03-16 This book aims to give a comprehensive overview of the current challenges and solution posed to the health care professionals who need to use mechanical ventilation to treat their patients Mechanical ventilation is a cornerstone of the treatment of critically ill patients as also dramatically underlined by the recent COVID 19 pandemic The topic is not simple to approach since it requires integration of multiple data which in turn result from complex interplays between patient's condition and ventilatory settings While technological development empowered advanced monitoring and decision support these also increase the burden of data on the practitioners Furthermore considering that sometimes mechanical ventilation is seen under two apparently opposite approaches physiology vs protocols the book aims to reconcile these two aspects And this has been done by each author following the above trajectory in their chapters The exposure of the topic begins from the pathophysiology i.e. the physiology of the disease so that the reader can better understand the concept and rationale of any given approach At the same time any rationale or hypothesis for as much as supported by physiology must hold at the proof of clinical research and evidence which is summarized in each chapter In summary the purposes is that the readers understand not only which is the best clinical practice to adopt but also why and which mechanisms this is based upon and how to approach a novel issue they might encounter The book addressed to physicians nurses and respiratory therapist features chapters on novel or hot topics like obviously COVID 19 ECMO but also MV in low resource setting *American Journal of Respiratory and Critical Care Medicine*, 2002
