Artificial intelligence in predicting, determining and controlling cell phenotype or tissue function in inflammatory diseases Melanie L. Hart,Bernd Rolauffs ,Ryuji

Kato,2024-05-10 The last decade has seen rapid development in the use of computational techniques at bulk tissue and single cell level However our knowledge remains limited in this regard and further progress is needed especially in inflammatory and degenerative diseases Controlling modeling or predicting cellular phenotype in this context using artificial intelligence AI will greatly improve the available in vitro in situ in vivo and in silico methods but also aid in the understanding of disease pathology and therapeutic efficiency These methods not only have ramifications for our pathophysiological understanding of tissue function but are also important for advancing AI methods in cell culture tissue explants or in vivo for immunologically relevant characteristics of single cells cell populations and tissues to predict cell or tissue function

Magnetic Resonance Imaging in Tissue Engineering Mrignayani Kotecha,Richard L. Magin,Jeremy J. Mao,2017-03-06 Magnetic Resonance Imaging in Tissue Engineering provides a unique overview of the field of non invasive MRI assessment of tissue engineering and regenerative medicine Establish a dialogue between the tissue engineering scientists and imaging experts and serves as a guide for tissue engineers and biomaterial developers alike Provides comprehensive details of magnetic resonance imaging MRI techniques used to assess a variety of engineered and regenerating tissues and organs Covers cell based therapies engineered cartilage bone meniscus tendon ligaments cardiovascular liver and bladder tissue engineering and regeneration assessed by MRI Includes a chapter on oxygen imaging method that predominantly is used for assessing hypoxia in solid tumors for improving radiation therapy but has the ability to provide information on design strategies and cellular viability in tissue engineering regenerative medicine

Repetitive Structures in Biological Sequences: Algorithms and Applications Marco Pellegrini,Alberto Magi,Costas S. Iliopoulos,2016-10-27 Repetitive structures in biological sequences are emerging as an active focus of research and the unifying concept of repeatome the ensemble of knowledge associated with repeating structures in genomic proteomic sequences has been recently proposed in order to highlight several converging trends One main trend is the ongoing discovery that genomic repetitions are linked to many biological significant events and functions Diseases e g Huntington s disease have been causally linked with abnormal expansion of certain repeating sequences in the human genome Deletions or multiple copy duplications of genes Copy Number Variations are important in the aetiology of cancer Alzheimer and Parkinson diseases A second converging trend has been the emergence of many different models and algorithms for detecting non obvious repeating patterns in strings with applications to in genomic data Borrowing methodologies from combinatorial pattern matching string algorithms data structures data mining and machine learning these new approaches break the limitations of the current approaches and offer a new way to design better trans disciplinary

research The articles collected in this book provides a glance into the rich emerging area of repeatome research addressing some of its pressing challenges We believe that these contributions are valuable resources for repeatome research and will stimulate further research from bioinformatic statistical and biological points of view

Essential Tissue Healing of the Face and Neck David B. Hom, 2009 This unique textbook focuses exclusively on wound healing of the face and neck integrating scientific principle with state of the art clinical precept Detailed step by step surgical techniques demonstrate the best methods of repair of tissue Contemporary healing concepts encompass the structures of the skin cartilage bone nerve oral mucosa middle ear mucosa and airway mucosa The book benefits from the diverse backgrounds and expertise of each of its authors bringing the reader new insights to the question of why some facial and neck wounds heal satisfactorily and others do not Dr Hom suggests a holistic approach to surgery of the face and neck that includes the healing process Future directions for wound healing of the face and neck are also illuminated The first section describes the healing aspects of the structures of the face and neck the second section addresses common clinical tissue healing problems encountered and methods to treat them The third section discusses specific therapies used to optimize healing
