Freeman, 2020-12-01 With *The Human Animal Earthling Identity* Carrie P. Freeman asks us to reconsider the devastating division we have created between the human and animal conditions leading to mass exploitation injustice and extinction As a remedy Freeman believes social movements should collectively foster a cultural shift in human identity away from an egoistic anthropocentrism human-centered outlook and toward a universal altruism species-centered ethic so people may begin to see themselves more broadly as human animal earthlings To formulate the basis for this identity shift Freeman examines overlapping values supporting life fairness responsibility and unity that are common in global rights declarations and in the current campaign messages of sixteen global social movement organizations that work on human civil rights nonhuman animal protection and/or environmental issues such as Amnesty International Human Rights Watch CARE People for the Ethical Treatment of Animals the World Wildlife Fund the Sea Shepherd Conservation Society the Nature Conservancy the Rainforest Action Network and Greenpeace She also interviews the leaders of these advocacy groups to gain their insights on how human and nonhuman protection causes can become allies by engaging common opponents and activating shared values and goals on issues such as the climate crisis enslavement extinction pollution inequality destructive farming and fishing and threats to democracy Freeman's analysis of activist discourse considers ethical ideologies on behalf of social justice animal rights and environmentalism using animal rights respect for sentient individuals as a bridge connecting human rights to a more holistic valuing of species and ecological systems Ultimately Freeman uses her findings to recommend a set of universal values

around which all social movements campaign messages can collectively cultivate respectful relations between human animal earthlings fellow sentient beings and the natural world we share      *The Ocean, Volume 1* Herve Claustre,Carolyn Scheurle,Laura Lorenzoni,Sanae Chiba,Emily King,2023-07-25 The ocean was the origin of life on earth billions of years ago and it is vital for the future of humanity It is vast deep harsh and somehow rebellious to uncover its secrets and hence there is much that is unexplored and misunderstood Scientists need to study the ocean to better understand its functioning and properties as well as how they shape our environment and impact us For example do you know what the role of the ocean is on weather and climate There still remains so much to explore in ocean biodiversity and the diverse resources that can be found for example fish stocks bio molecules and also minerals oil and gas How can we make sure that our use of these resources is done sustainably and how can we minimize our impacts e g pollution acidification on the ocean as our human population increases In this collection of Frontiers for Young Minds scientists from various disciplines in oceanography share their knowledge and motivations give insights in innovative tools and recent discoveries to better understand this ocean The collection will target a large range of oceanic environments from the open ocean to the coast the surface to the abysses also including specific areas like coral reefs or sea ice environments It will cover marine disciplines that range from physics to chemistry from biology to ecology and from economy to conservation and policies It will address innovative tools and methods that are used to observe and characterize oceanic properties and features ships and satellites the highly diverse variety of robots as well as genomics or artificial intelligence Finally it will encompass a great variety of scales ranging from the diel to geological time scales and from local regional to global scales and also from the tiniest cells to the biggest living animals on our planet The United Nations have declared the 2021-2030 period as the Decade of Ocean Science for Sustainable Development stressing the urgent need to approach fundamental issues related to the ocean and the future of humanity on well sounded scientific grounds and knowledge This Ocean collection aims to provide information to young readers that will help them to increase their understanding of the ocean and its central role in nature and our lives We hope to empower them to make informed decisions in these challenging times and to engage to protect study and enjoy its richness      **Ocean Animals** ,2001 Describes the habitat appearance food and behavior of four animals that live in the ocean
